Table of Contents

Table of Contents

Chapter 1 – Overview of Blood and Hematopoietic Tissues
(Aster and Bunn)
- Impact of blood in health and disease
  - Red blood cell
  - White blood cells
  - Platelets
  - Blood clotting proteins
  - The bone marrow
  - The spleen
  - The thymus
  - Lymph nodes

Chapter 2 – Hematopoiesis and the Bone Marrow
(Scadden)
- Hematopoietic cell differentiation
  - Myeloid lineage
  - Erythroid lineage
  - Megakaryocyte-platelet lineage
  - Lymphoid lineages – B, T, and NK cells
- The biology of the stem cell
  - Self-renewal
  - Stem cell ontogeny
  - Stem cell trafficking
- The regulation of blood cell formation
  - The bone marrow niche and cell-cell interactions
  - Cytokines in early hematopoietic differentiation
  - Lineage specific cytokines
  - Cytokine therapy
  - Stem cell therapy

Section I – Anemias and Disorders of the Red Blood Cell

Chapter 3 – Overview of the Anemias
(Bunn)
(See full sample chapter)
- Definition of anemia
- Adaptations to anemia
- Alterations in blood flow
- Changes in oxygen unloading
- Stimulation of erythropoiesis
- Signs and symptoms of anemia
- Pathophysiology of anemia
- Anemia due to blood loss
- Anemia due to decreased red cell production
  - Microcytic
  - Macrocytic
  - Normocytic
- Anemia due to increased red cell destruction

Chapter 4 - Anemias due to Bone Marrow Failure or Infiltration
(Bunn)
- Congenital causes of bone marrow failure
  - Acquired aplastic anemia and pure red cell aplasia
  - Myelodysplasia
  - Leukemias
  (Myelodysplasia and the leukemias will be covered in detail in Chapters 21 and 22).

Chapter 5 – Iron Homeostasis: Deficiency and Overload
(Heeney)
- Normal iron homeostasis
  - Iron binding proteins: transferrin, ferritin
  - The iron cycle
  - Role of hepcidin in iron regulation
  - Iron utilization in erythropoiesis
- Laboratory evaluation of iron status
- Serum iron and transferrin saturation
- Serum ferritin
- Bone marrow and liver iron stores
- Serum transferrin receptor
- Iron deficiency
- Etiology
- Clinical features – signs and symptoms
- Hematological features
- Treatment
Iron overload
Primary – inherited mutations in proteins regulating iron homeostasis
Secondary – transfusional hemosiderosis
Chapter 6 - Megaloblastic Anemias
(Heeney)
Biochemistry of vitamin B12 and folate
Pathophysiology
Megaloblastic marrow and peripheral blood morphology
Vitamin B12 and folate absorption
B12 deficiency
Etiology
Clinical presentation (signs and symptoms)
Laboratory evaluation
Treatment
Folate deficiency
Etiology
Clinical presentation (signs and symptoms)
Laboratory evaluation
Treatment
Chapter 7 - Anemias associated with Chronic Disease
(Heeney and Bunn)
Anemia of chronic inflammation
Infection
Cancer
Connective tissue disorders
Pathophysiology – role of hepcidin
Lab features
Treatment
Anemia of renal insufficiency
Cause
Erythropoietin levels
Treatment with erythropoietin and iron
Anemia of chronic liver disease
Anemia of endocrine hypofunction
Chapter 8 – Thalassemia
(Nathan)
Ontogeny of globin gene expression
Organization of alpha and beta globin genes
Definition and classification of the thalassemias
Mutations responsible for the thalassemias
Beta thalassemia
Beta^+ versus beta^0
Beta thal major
Cellular pathogenesis
Clinical presentation
Laboratory evaluation
Complications
Treatment
Red cell transfusion
Iron chelation
Stem cell transplant
Prevention – prenatal diagnosis
Beta thal intermedia
Beta thal minor
Interacting beta thalassemias – Hb S and Hb E
Alpha thalassemia
Four degrees of gene deletion – correlate with clinical presentation
Three alpha gene deletion – Hb H disease
Four alpha gene deletion – Hydrops fetalis
Prevention – prenatal diagnosis
Chapter 9 – Sickle Cell Disease and other Disorders of Hemoglobin Structure
(Bunn)
Inheritance – beta globin structural mutation; b6 Glu → Val
The sickling disorders: SS, S^0^+Thal, S^+^+Thal, SC, AS
Molecular pathogenesis
Structure of the sickle fiber
Kinetics of fiber formation
In vivo significance of polymer formation
Cellular aspects of in vivo sickling and vaso-occlusion
Contribution of Hb F
Sickle cell – endothelial cell adhesion
Clinical manifestations
Constitutional: growth, development and susceptibility to infections
Hemolytic anemia
Vaso-occlusion
Acute pain crises
Acute chest syndrome
Chronic organ damage
Stroke
Bone – aseptic necrosis
Renal: impaired concentrating ability; impaired glomerular function
Pulmonary hypertension
Treatment
Supportive – analgesia, oxygen, fluid and pH balance
Prophylaxis: penicillin and vaccinations
Hydroxyurea – induction of Hb F
Novel therapeutic strategies

Chapter 10 – Other Inherited Hemolytic Anemias
(Lux)
Disorders of the red cell membrane
Molecular anatomy of the red cell membrane
Hereditary spherocytosis – mutations in spectrin, band 4.1, band 3
Other inherited membrane disorders
Disorders of red cell metabolism
Hexose monophosphate shunt and G6PD deficiency
Glycolytic pathway – pyruvate kinase deficiency

Chapter 11 – Acquired Hemolytic Anemias
(Bunn)
Acquired membrane disorders
Paroxysmal nocturnal hemoglobinuria
Spur cell anemia
Traumatic hemolytic disorders
Thrombotic thrombocytopenic purpura (Covered in detail in Chapter 14)
Hemolytic uremic syndrome
Disseminated intravascular coagulation (Covered in detail in Chapter 16)
Heart valve hemolysis
Immune hemolytic anemias
Pathophysiologic principles
Clinical presentation and course
Warm antibody hemolysis
Cold antibody hemolysis
Lab diagnosis
Treatment

Chapter 12 - Erythrocytosis (Polycythemia)
(Bunn)
Pathophysiologic principles: Algorithm for evaluating patients with erythrocytosis
Primary erythrocytosis – polycythemia vera
(See Chapter 20 for coverage of molecular pathogenesis, Chapter 22 for clinical presentation and course, diagnosis and treatment)
Secondary erythrocytosis
Appropriate erythropoietin production
High altitude hypoxemia
Pulmonary hypoxemia
Cardiac hypoxemia (right to left shunt)
Mutant hemoglobin with high oxygen affinity
Inappropriate erythropoietin production
Tumors: renal, hepatic
Von Hippel Lindau syndrome
Inherited disorders of oxygen sensing HIF pathway
