Table of Contents

1. Why Purify Enzymes?
   Murray Deutscher and Arthur Kornberg

Section I: Developing Purification Procedures

2. Strategies and Considerations for Protein Purifications
   Stuart Linn

3. Use of Bioinformatics in Planning a Protein Purification
   Richard R. Burgess

4. Preparing A Purification Summary Table
   Richard R. Burgess

Section II: General Methods for Handling Proteins and Enzymes

5. Setting Up A Laboratory
   Murray P. Deutscher

6. Buffers: Principle and Practice
   Vincent S. Stoll and John S. Blanchard

7. Measurement of Enzyme Activity
   T. K. Harris and M. M. Keshwani

8. Quantitation of Protein
   James E. Noble and Marc J. A. Bailey

9. Concentration of Proteins and Removal of Solutes
   Jonathan K. Romero, David R. H. Evans and Matthew Westoby

10. Maintaining Protein Stability
    Murray P. Deutscher

Section III: Recombinant Protein Expression and Purification

11. Selecting an Appropriate Method for Expressing a Recombinant Protein
    William H. Brondyk

12. Bacterial Systems for Production of Heterologous Proteins
    Frank R. Collart, Ashley M. Frank and Sarah Zerbs

13. Expression in the Yeast Pichia Pastoris
    James M. Cregg, Ilya Tolstorukov, Anasua Kusari, Jay Sunga, Knut Madden and Thomas Chappell

14. Baculovirus-Insect Cell Expression Systems
    Donald L. Jarvis

15. Recombinant Protein Production By Transient Gene Transfer Into Mammalian Cells
    Sabine Geisse and Cornelia Fux
16. Tagging For Protein Expression
   Arun Malhotra

17. Refolding of Solubilized Inclusion Body Proteins
   Richard R. Burgess

   Section IV: Preparation of Extracts and Subcellular Fractionation

18. Advances In Preparation of Biological Extracts for Protein Purification
   Anthony C. Grabski

19. Isolation of Subcellular Organelles and Structures
   Jörg Von Hagen and Uwe Michelsen

   Section V: Purification Procedures: Bulk Methods

20. Protein Precipitation Techniques
   Richard R. Burgess

21. Affi-Gel Blue for Nucleic Acid Removal and Early Enrichment of Nucleotide Binding Proteins
   Murray P. Deutscher

   Section VI: Purification Procedures: Chromatographic Methods

22. Ion Exchange Chromatography
   Alois Jungbauer and Rainer Hahn

23. Gel Filtration
   Earle Stellwagen

24. Protein Chromatography on Hydroxyapatite Columns
   Larry J. Cummings, Mark A. Snyder and Kimberly Brisack

25. Theory and Use of Hydrophobic Interaction Chromatography in Protein Purification Applications
   Justin T. Mccue

   Section VII: Purification Procedures: Affinity Methods

26. Affinity Chromatography: General Methods
   Marjeta Urh, Dan Simpson and Kate Zhao

27. Immobilized-Metal Affinity Chromatography (IMAC)
   Frank Schäfer, Helena Block, Barbara Maertens, Anne Spriestersbach, Nicole Brinker, Jan Kubicek, Roland Fabis
   And Jörg Labahn

28. Identification, Production, and Use of Polyol-Responsive Monoclonal Antibodies for Immunoaffinity Chromatography
   Nancy E. Thompson, Katherine M. Foley, Elizabeth S. Stalder, And Richard R. Burgess

   Section VIII: Purification Procedures: Electrophoretic Methods

29. One-Dimensional Gel Electrophoresis
   David E. Garfin

30. Protein Analysis Using High-Resolution Two-Dimensional Polyacrylamide Gel Electrophoresis and Isoelectric Focusing
   Friedman

31. Protein Gel Staining Methods: An Introduction And Overview
   Thomas H. Steinberg

32. Elution of Proteins From Gels
Richard R. Burgess

33. Immunodetection By Protein Blotting Performing and Optimizing Western Blots With An Emphasis on Chemiluminescent Detection
   Alice Alegría-Schaffer, Krishna Vattem and Andrew Lodge
   Section IX: Purification Procedures: Membrane Proteins And Glycoproteins

34. Detergents: An Overview
   Dirk Linke

35. Purification of Membrane Proteins
   Sue-Hwa Lin and Guido Guidotti

36. Purification of Recombinant G-Protein-Coupled Receptors
   Reinhard Grisshammer

37. Cell-Free Translation Of Integral Membrane Proteins Into Unilamelar Liposomes
   Michael A. Goren, Akira Nozawa, Shin-Ichi Makino, Russell L. Wrobel and Brian G. Fox
   Section X: Characterization of Purified Proteins

38. Determination of Protein Purity
   David G. Rhodes and Thomas M. Laue

39. Determination of Size, Molecular Weight, and Presence of Subunits
   David G. Rhodes, Robert E. Bossio and Thomas M. Laue

40. Identification and Quantification of Protein Posttranslational Modifications
   Andrew Link

41. Parallel Methods For Expression And Purification
   Scott A. Lesley

42. Techniques To Isolate O2-Sensitive Proteins: [4Fe-4S]-FNR As An Example
   Aixin Yan and Patricia J. Kiley

43. Rethinking Your Purification Procedure
   Murray Deutscher

44. Important But Little Known (Or Forgotten) Artifacts in Protein Biochemistry
   Richard R. Burgess
