Table of Contents

1. Predicting Fluorescence Lifetimes and Spectra of Biopolymers
   Patrik R. Callis

   Elizabeth Y. Scribner, Hassan M. Fathallah-Shaykh

3. Strategies for articulated multibody-based adaptive coarse grain simulation of RNA
   Mohammad Poursina, Kishor D. Bhalariao, Samuel C. Flores, Kurt S. Anderson, Alain Laederach

4. Modeling Loop Entropy
   Gregory S. Chirikjian

5. Inferring Functional Relationships and Causal Network Structure from Gene Expression Profiles
   Radhakrishnan Nagarajan

6. Numerical solution of the chemical master equation: uniqueness and stability of the stationary distribution for chemical networks, and mRNA bursting in a gene network with negative feedback regulation
   E. S. Zeron, M. Santillan

7. How molecular should your molecular model be? On the level of molecular detail required to simulate biological networks in systems and synthetic biology
   Didier Gonze, Wassim Abou-Jaoudé, Adama Ouattara, and José Halloy

8. Computational modelling of biological pathways by executable biology
   Maria Luisa Guerriero John K. Heath

9. Computing Molecular Fluctuations in Biochemical Reaction Systems Based on A Mechanistic, Statistical Theory of Irreversible Processes
   Don Kulasiri

10. Probing the input-output behaviour of biochemical and genetic systems: system identification methods from control theory
    David McMillen, Brian Ingalls, Jordan Ang

11. Biochemical pathway modelling tools for drug target detection in cancer and other complex diseases
    Alberto Marin-Sanguino, Shailendra K. Gupta, Eberhard O. Voit and Julio Vera

12. Deterministic and Stochastic Simulation and Analysis of Biochemical Reaction Networks: The Lactose Operon Example
    Necmettin Yildirim, Caner Kazancı F

    Joshua S. Richman MD, PhD

14. Scaling differences of heartbeat excursions between wake and sleep periods
    L. Guzmán-Vargas, I. Reyes-Ramírez, R. Hernández Páez, F. Angulo-Brown

15. Changepoint analysis for single-molecule polarized total internal reflection fluorescence microscopy experiments
    John F. Beausang, Yale E. Goldman, and Philip C. Nelson
16. Inferring mechanisms from dose-response curves

17. Spatial Aspects in Biological System Simulations
   Haluk Resat, Michelle N. Costa, and Harish Shankaran

18. Computational Approaches to Modeling Viral Structure and Assembly
   Stephen C. Harvey, Anton S. Petrov, Batsal Devkota and Mustafa Burak Boz

19. An Object-Oriented Software Suite for the Simulation and Design of Macromolecules

20. Computational Design of Intermolecular Stability and Specificity in Protein Self-Assembly
   Vikas Nanda, Sohail Zahid, Fei Xu, Daniel Levine
