Brain Development: Normal Processes and the Effects of Alcohol and Nicotine

Miller, Michael W.

Table of Contents

Acknowledgments, Michael W. Miller

1. Models of neurotoxicity provide unique insight into normal development, Michael W. Miller

Part I

Normal Development

2. Cell proliferation, Bernhard Suter, Pradeep G. Bhide: Harvard Medical School

3. Neuronal migration, Huaiyu Hu: SUNY-Upstate Medical University

4. Neuronal differentiation: from axons to synapses, C. David Mintz, Iddil H. Bekirov, Tonya R. Anderson, and Deanna L. Benson, Mount Sinai School of Medicine

5. Cell death, Stevens K. Rehen and Jerold J.M. Chun: Scripps Research Institute

6. Intracellular pathways of neuronal death, Sandra M. Mooney: SUNY-Upstate Medical University and George I. Henderson: University of Texas Health Sciences Center

Part II

Ethanol-affected development

8. Prenatal alcohol exposure and human development, Claire D. Coles: Emory University School of Medicine

10. Prenatal ethanol exposure and fetal programming: implications for endocrine and immune development and long-term health, Joanna H. Sliwowska, Xingqi Zhang and Joanne Weinberg: University of British Columbia

11. Early exposure to ethanol affects and the proliferation of neuronal precursors, Michael W. Miller

12. Effects on ethanol on the regulation of cell cycle in neural stem cells, W. Michael Zawada and Mita Das; WZ, MD: University of Colorado Health Sciences Center

13. Mechanisms of ethanol-induced alterations in neuronal migration, Julie A. Siegenthaler and Michael W. Miller: SUNY-Upstate Medical University

14. Effects on ethanol on mechanisms regulating neuronal process outgrowth, Tara A. Lindsley: Albany Medical School

15. Neuronal survival is compromised by ethanol: extracellular mediators, Michael W. Miller and Marla B. Bruns: SUNY-Upstate Medical University and Paula L. Hoffman: University of Colorado Health Sciences Center

16. Intracellular events in neuronal death targeted by ethanol, Sandra M. Mooney: SUNY-Upstate Medical University and George I. Henderson

Part III

Nicotine-affected development

17. Tobacco use during pregnancy: epidemiology and effects on offspring, Jennifer A. Willford, Nancy L. Day, and Marie D. Cornelius: University of Pittsburgh School of Medicine

18. Prenatal nicotine exposure and animal behavior, Brenda M. Elliot and Neil E. Grunberg: Uniformed Services University of Health Sciences

20. Neural precursors as preferential targets for drug abuse: long term consequences and latent susceptibility to CNS disorders, Kurt F. Hauser, Nazira El-Hage, Shreya Buch, Gregory N. Barnes, Henrietta S. Bada, and James R. Pauly: University of Kentucky

21. Nicotinic receptor regulation of developing catecholamine systems, Frances E. Gavin, uphill's Arm, Kathy Gillande, Robert J. Ferry, Ryan Hamer, and Dennis C. Carp, University of Kentucky Science Center

22. Nicotinic receptor regulation of developing forebrain systems, Frances E. Gavin, uphill's Arm, Kathy Gillande, Robert J. Ferry, Ryan Hamer, and Dennis C. Carp, University of Kentucky Science Center
