Table of Contents

Essential background information
1. A brief history of cardiac electrophysiology
2. Cardiac electrical system
3. Cardiac arrhythmia mechanisms: essential concepts
4. The diagnostic intracardiac electrophysiology study: essential information and basic principles
5. Trans-septal puncture
6. 3D cardiac mapping

ELECTROPHYSIOLOGICAL TESTING FOR SPECIFIC INDICATIONS
7. Narrow complex tachycardia
8. Broad complex tachycardia
9. Electrophysiological testing for sudden cardiac death risk assessment
10. Electrophysiological testing for bradycardia

MECHANISMS, ECGS, AND ELECTROPHYSIOLOGICAL FEATURES OF THE MAIN CARDIAC ARRHYTHMIAS
11. Atrio-ventricular nodal re-entrant tachycardia (AVNRT)
12. Accessory pathways and atrio-ventricular re-entrant tachycardia (AVRT)
13. Common atrial flutter
14. Atrial tachycardia and AF
15. Ventricular tachycardia types and mechanisms

CATHETER ABLATION TECHNIQUES
16. Ablation of the atrio-ventricular (AV) junction
17. Ablation of atrio-ventricular nodal re-entrant tachycardia (AVNRT)
18. Ablation of accessory pathways and atrio-ventricular re-entrant tachycardia (AVRT)
19. Ablation of atrial flutter
20. Atrial fibrillation ablation
21. Ablation of other atrial tachyarrhythmias
22. Ventricular tachycardia ablation
