

Anesthesia and Analgesia for Veterinary Technicians

Thomas, John DVM

ISBN-13: 9780323055048

Table of Contents

1. Introduction to Anesthesia

History of anesthesia

The Veterinary Technician's Role in the Practice of Anesthesia

2. Patient Preparation

Communication-A Key to Success

The Minimum Patient Database

Patient History

Physical Examination and Physical Assessment

Preanesthetic Diagnostic Workup

Determination of the Physical Status Classification

Selection of the Anesthetic Protocol

Preinduction Patient Care

Withholding Food before Anesthesia

Patient Stabilization

Intravenous Catheterization

Reasons for Intravenous Catheterization

Choosing and Placing an Intravenous Catheter

Fluid administration

Composition of Body Fluids

Fluid Homeostasis

Fluid Needs

Classification of IV Fluids

IV Fluid Selection and Administration Rates

Adverse Effects of Fluid Administration

Calculating Fluid Administration Rates

Other Preanesthetic Care

3. Anesthetic Agents and Adjuncts

Introduction to Anesthetic Agents and Adjuncts

Agonists, Partial Agonists, Mixed Agonist-Antagonists, and Antagonists

Analgesic Effects of Anesthetics and Adjuncts

Using drugs in combination

Regulatory Considerations for Controlled Substances

Preanesthetic Medications

- Reasons for the use of preanesthetic medications
 - Anticholinergics
 - Tranquilizers and Sedatives
 - Opioids
 - Neuroleptanalgesia
 - Opioid Antagonists
- Injectable Anesthetics
 - Barbiturates
 - Propofol
 - Dissociative anesthetics
 - Etomidate
 - Guaifenesin.
- Inhalation Anesthetics
 - Classes of Inhalation Agents
 - CNS and Respiratory Stimulants
 - Doxapram

4. Anesthetic Equipment

- Endotracheal Tubes and Associated Equipment
 - Endotracheal tube parts
 - Laryngoscopes
 - Masks
 - Anesthetic Chambers
- Anesthetic Machines
 - Components of the Anesthetic Machine
 - Rebreathing Systems
 - Non-rebreathing Systems
 - Operation of the Anesthetic Machine
 - Care and Maintenance of Anesthetic Equipment

5. Anesthetic Monitoring

- Introduction to Monitoring
- Stages and Planes of Anesthesia
 - Overview of Anesthetic Stages and Planes
- Finding the Optimum Depth
- Determining whether or not the Patient is Safe
- Indicators of Circulation
 - Heart rate
 - Heart rhythm
 - Capillary refill time

Blood Pressure
Pulse strength
Indicators of Oxygenation
Mucous membrane color
Physiology of Oxygen transport
Pulse Oximeter
Blood Gas Analysis
Indicators of Ventilation
Respiratory rate
Tidal volume
Respiratory Character
Apnea monitor
Capnograph (End-tidal CO₂ monitor)
Blood gas analysis
Indicators of Body Temperature
Assessment of Anesthetic Depth
Reflexes and Other Indicators of Anesthetic Depth
Judging Anesthetic Depth
Recording Information during Anesthesia

6. Special Techniques

Local anesthesia
Local anesthetic agents
Characteristics of local anesthetics
Mechanism of Action
Route of Administration of Local Anesthetics
Toxicity of Local Anesthetics
Assisted and controlled ventilation
Ventilation in the Awake Animal
Ventilation in the Anesthetized Animal
Types of Controlled Ventilation
Risks of Controlled Ventilation
Neuromuscular blocking agents

7. Analgesia

Physiology of pain
Consequences of untreated pain
Signs of pain in animals
Pain assessment tools
Assessing response to therapy
Perioperative pain management

Pharmacologic analgesic therapy

 Opioid Agents

 Nonsteroidal Antiinflammatory Drugs

 Other Analgesic Agents

 Multimodal Therapy

 Home Analgesia

 Nursing care

 Non-pharmacologic therapies

8. Canine and Feline Anesthesia

 Patient Preparation

 Selecting a Protocol

 Summary of a General Anesthetic Procedure

 Anesthetic induction with an IM agent or combination

 Anesthetic induction with an IV injection of an ultra-short acting agent to effect

 Total Intravenous Anesthesia (TIVA) by IV boluses of an ultra-short acting agent

 Total Intravenous Anesthesia (TIVA) by constant rate infusion (CRI)

 Induction and maintenance with an inhalant agent

 IV induction and maintenance with an inhalant agent

 Equipment Preparation

 Premedication or Sedation

 Anesthetic Induction

 IV Induction

 Inhalation Agents

 Mask Induction

 Chamber Induction

 IM Induction

 Oral administration

 Endotracheal Intubation

 Equipment for Endotracheal Intubation

 Selecting an Endotracheal Tube

 Preparing the Tube

 Intubation Procedure

 Checking for Proper Placement

 Securing the Tube

 Cuff inflation

 Laryngospasm

 Complications of Intubation

 Maintenance of Anesthesia

 Maintenance with an Inhalant Agent

Maintenance with repeat boluses of propofol or other ultrashort-acting agent

Maintenance with a CRI

Maintenance with injectable and inhalant agents

Maintenance with an IM injection

Patient Positioning, Comfort and Safety

Anesthetic Recovery

Anesthetist's Role in the Recovery Period

Signs of Recovery

Monitoring

Oxygen Therapy

Extubation

The Postanesthetic Period

9. Equine Anesthesia

Patient Preparation

Selecting a Protocol

Summary of a General Anesthetic Procedure

Equipment Preparation

Premedication or Sedation

Standing chemical restraint

Anesthetic Induction

IV Induction

Inhalation Induction via Nasotracheal Tube

Endotracheal Intubation

Equipment for Endotracheal Intubation

Selecting an Endotracheal Tube

Preparing the Tube

Intubation Procedure

Complications of Intubation

Maintenance of Anesthesia

Maintenance with an Inhalant Agent

Maintenance with intravenous agents, or TIVA

Maintenance with injectable and inhalant agents

Patient Positioning, Comfort and Safety

Anesthetic Recovery

Preparation for recovery

Monitoring during recovery

Signs of recovery

Extubation

Standing after regaining consciousness

The Postanesthetic Period

10. Food Animal Anesthesia

Ruminants

Patient preparation

Selecting a Protocol

Summary of a General Anesthetic Procedure

Equipment Preparation

Premedication or Sedation

Anesthetic Induction

Endotracheal Intubation

Maintenance of Anesthesia

Patient Positioning, Comfort and Safety

Anesthetic Recovery

The Post-anesthetic Period

Swine

Physical examination

Sedation

Anesthetic Induction

Maintenance of Anesthesia

Recovery

11. Anesthesia of Rodents and Rabbits

Patient evaluation

Handling and restraint

Physical examination

Diagnostic tests

Preanesthetic patient care

Withholding food

Correction of preexisting problems

Preanesthetic agents

Anticholinergics

Phenothiazines

Benzodiazepines

Alpha₂ adrenergic agonists

Opioids

General anesthesia

Induction techniques and agents

Intubation and maintenance of anesthesia

Postoperative care

Anesthetic emergencies

Respiratory depression

Circulatory failure

Postoperative Analgesia

Pain assessment

Analgesic agents

Chronic pain

Administration of analgesics

12. Anesthetic Problems and Emergencies

Reasons That Anesthetic Problems and Emergencies Arise

Human Errors That May Lead to Anesthetic Problems and Emergencies

Equipment Issues That May Lead to Anesthetic Problems and Emergencies

Adverse Effects of Anesthetic Agents

Patient Factors that may lead to Anesthetic Problems and Emergencies

Response to Anesthetic Problems and Emergencies

Role of the Veterinary Technician in Emergency Care

General Approach to Emergencies

Emergency Situations That May Arise During Anesthesia

Problems That May Arise in the Recovery Period

13. Workplace Safety

Hazards of Waste Anesthetic Gas

Short-Term Effects

Long-Term Effects

Assessment of Risk

Reducing Exposure to Waste Anesthetic Gas

Anesthetic techniques and procedures

Monitoring Waste Gas Levels

Safe Handling of Compressed Gases

Fire Safety Precautions

Use and Storage of Compressed Gas Cylinders

Accidental Exposure to Injectable Agents

Glossary
