Table of Contents

The role of HDL in the prevention of atherosclerosis.
Cholesterol breakdown and the significance in atherosclerosis.
Triacylglycerol hydrolase, VLDL assembly and development of atherosclerosis.
Regulation of Hepatic Production of Lipoproteins Containing Apolipoprotein B and the significance in atherosclerosis.
Dyslipidemia and thrombogenesis.
Mouse models of Diabetes and Atherosclerosis.
SR-BI, reverse cholesterol transport and atherogenesis.
Hypertension and atherosclerosis.
Dietary fats, transcription factors and heart health.
Dietary fatty acid intake and stroke.
Homocysteine metabolism and atherosclerosis.
Vitamin supplements in preventing atherosclerosis.
Oxidized lipids and heart disease.
Reverse cholesterol transport and prevention of atherosclerosis.
Homocysteine, diabetes mellitus and atherosclerosis.
Treating low HDL—From bench to bedside.
Atherosclerosis is an infectious disease.
