## Table of Contents

**Brief Foreword by the Editors** -
Foreword and Introduction: Barry Marshall and Robin Warren - Chapter 1. Overview and Pathology of Gastric Cancer: P. Correa, Vanderbilt University - Chapter 2. Epidemiology of gastric cancer and H. pylori: Julie Parsons, Stanford -
Chapter 3. Diet and Gastric Cancer: Bob Russell, NEMC/Tufts Nutrition Center -
Chapter 4. MALT lymphomas: clinicopathological features and molecular pathogenesis: Anu Meinders -
Chapter 5. Gastrointestinal Stromal Tumors of Gastric Origin: Monica Bertagnolli, Davidoff Cancer Institute, Harvard University -
Chapter 6. Human Gastric Neuroendocrine Neoplasia & Current Pathological Status: Guido Rindi and Enrico Solcia, University of Parma, Italy -
Chapter 7. Gastrointestinal Stromal Tumors: Robert Ray, Neil E. Kaltz, Fuyu Sato, Ayse Metin-Seyhan, Mayo Clinic -
Chapter 8. Epstein-Barr Virus and Gastric Cancer: Sheng-Ching Wu, Chia-Tung Shun, Jet Lin, National Taiwan University Hospital -
Chapter 9. Role of host genetic susceptibility in the pathogenesis of gastric cancer: K. Li-Chou -
Chapter 10. Cancer genetics of human gastric adenocarcinomas: Raman Kalgh Ji and Steven M. Powell, University of Virginia -
Chapter 11. Overview of genetics and proteomics in gastric cancer: Patrick Tan and A. Boussioutas -
Chapter 12. Animal Models of Gastric Carcinomas: J.G. Fox, MIT -
Chapter 13. Insights into the Development of Pre-neoplastic Metaplasia: SWEW and autocrine etiology: J.R. Goldenring and Sachiyo Nomura, Vanderbilt University -
Chapter 14. Dissection of E-cadherin-catenin complexes in pre-neoplastic lesions of gastric cancer and effects of H. pylori eradication: Benjamin Wong (Hong Kong) -
Chapter 15. Role of calp and other virulence factors in H. pylori: Takeshi Azuma -
Chapter 16. The role of Helicobacter pylori virulence factors in rodent and primate models of disease: Rick Dues, Vanderbilt University -
Chapter 17. Host Immunity in the Development of Gastric Preneoplasia: Peter Grist and Sheila Crew, University of Virginia -
Chapter 18. Atrophy and Altered Heterochromatin Signaling Promoting Gastric Cancer: Juanita L. Merchant and Tama Zavros, University of Michigan and University of Cincinnati -
Chapter 19. Overview of mouse genetic models of gastric cancer: A. Giordano -
Chapter 20. Prostaglandin and TGF-b Signaling in Gastric Cancer: M. Taketo and Masanobu Oshima -
Chapter 21. REG Proteins and Other Growth Factors in Gastric Cancer: T. Chiba -
Chapter 22. Role of Bone Marrow-Derived Cells (BMDC) in Gastric Adenocarcinoma: J.H. Houghton and T.C. Wang, UMass and Columbia University -
Chapter 23. Stromal cells and tumor microenvironment: A. Varro, University of Liverpool -
