Table of Contents

Foreword.
Milk Lipids: A Source of Bioactive Molecules; Trans Fatty Acids and Bioactive Lipids in Ruminant Milk.
Expression and Nutritional Regulation of Lipogenic Genes in the Ruminant Lactating Mammary Gland.
Lipophilic Microconstituents of Milk.
Biological Activity of Native Milk Proteins- Species Specific Effects: Milk Fat Globule Membrane Components - A Proteomic Approach.
Milk Lipoprotein Membranes and Their Imperative Enzymes.
Lactoferrin Structure and Functions.
Milk sCD14: A Soluble Pattern Recognition Receptor in Milk.
Apoptosis and Tumor Cell Death in Response to HAMLET (Human alpha-lactalbumin made lethal to tumor cells).
Ovine Proline Rich Protein from Colostrum: Colostrinine with Immunomodulatory Activity.
Milk Pepetides: Milk Peptides and Immune Response in the Neonate.
Protective Effect of Milk Peptides: Antibacterial and Antitumoral Properties.
Antihypertensive Peptides from Milk.
Induced Biologically Active Components from the Milk of Livestock Animals: Manipulation of Milk Fat Composition through Transgenesis.
Producing Recombinant Human Milk Proteins in the Milk of Livestock Species.
The Influence of Nutrition on the Production of Bioactive Milk Components: Insulin-like Growth Factors (IGFs), IGF Binding Proteins and Other Endocrine Factors in Milk: Role in the Newborn.
Probiotics, Immunomodulation and Health Benefits.
Potential Anti-Inflammatory and Antinfectious Effects of Human Milk.
On the role of breastfeeding in the prevention of allergic diseases.
Index.
