

# Computational Structural Dynamics and Earthquake Engineering

Papadrakakis, Manolis

ISBN-13: 9780415452618

## Table of Contents

### Computational Structural Dynamics

1. G.I. Schuÿller: Computational stochastic dynamics - some lessons learned
2. F. Armero: Energy-momentum algorithms for nonlinear solid dynamics and their assumed strain finite element formulation
3. S. Krenk: Energy conservation and high-frequency damping in numerical time integration
4. P. Le Tallec, F. Dambakizi, P. Hauret: Numerical solution of dynamic contact problems
5. C. Soize, C. Chen, J.-F. Durand, D. Duhamel, L. Gagliardini: Computational elastoacoustics of uncertain complex systems and experimental validation
6. V. V. Krylov: Propagation of plate bending waves in the vicinity of one- and two-dimensional acoustic 'black holes'
7. D. Moens, D. Vandepitte, H. De Gerssem, M. De Munck, W. Desmet: Structural dynamics design validation and optimisation of structures with imprecise parameters using the fuzzy finite element method
8. W. P. De Wilde, Jan Van Steirteghem: Morphological indicators and the prediction of the first natural frequency of a lightweight structure
9. E.J. Sapountzakis, V.G. Mokos: Dynamic Analysis of Plates Stiffened by Parallel Beams with Deformable Connection
10. W. Schiehlen, R. Seifried: Impacts on Beams: Uncertainty in Experiments and Numerical Simulation
11. E. Paraskevopoulos, C. Panagiotopoulos, D. Talaslidis: Rational derivation of conserving time integration schemes: the moving-mass case
12. G. K. Tairidis, G.E. Stavroulakis, D.G. Marinova, E.C. Zacharenakis: Fuzzy active control of smart beams
13. H. Lane, P. Kettil, N.-E. Wiberg: Rail Vibrations caused by Ground Stiffness Transitions
14. D.C. Rizos, J. OÿBrian, E. Leon: Development and applications of a staggered FEM-BEM methodology for ground vibrations due to moving train loads

### Computational Earthquake Engineering

1. A. S. Elnashai, O. S. Kwon, B. F. Spenser, N. Nakata, J. Ji: Distributed hybrid earthquake response history analysis of interacting and multi-resolution structural-geotechnical systems
2. M. Dolÿek, P. Fajfar: Simplified probabilistic seismic performance assessment of buildings
3. A.H. Barbat, S. Oller, P. Mata A., J.C. Vielma P.: Numerical modeling of the seismic response of buildings with energy dissipators
4. W. B. Kraetzig, Y. S. Petryna: Structural damage description for estimates of seismic vulnerability
5. E. Sibilio, M. Ciampoli, J.L. Beck: Structural health monitoring by bayesian updating
6. G. De Roeck, E. Reynders:Vibration monitoring as a diagnosis tool for structural condition assessment
7. K. Meskouris, S. Holler, C. Butenweg, Daniel Meiners: A multiphase model with hypoplastic formulation of the solid phase and its application to earthquake engineering problems
8. A. M. Reinhorn, M. V. Sivaselvan, G. F. Dargush, O. Lavan: Mixed Lagrangian formulation in analysis of collapse of structures
9. E. Spacone, G. Camata, M. Faggella: Nonlinear models and nonlinear procedures for seismic analysis of reinforced concrete frame structures
10. M. Fragiadakis, R. Pinho, S. Antoniou: Modelling inelastic buckling of reinforcing bars under earthquake loading
11. C.P. Pantelides, S.M. Adan, L. D.Reaveley: Analyzing steel moment-resisting connections using finite element modeling
12. A. Ansal, A. Kurtulus, G. Tÿk: Earthquake damage scenario software for urban areas
13. M. N.Aydinoglu, G. Ænem: Nonlinear performance assessment of bridges with Incremental Response Spectrum Analysis (IRSA) procedure
14. G.A. Papagiannopoulos, D.E. Beskos: The equivalent modal damping concept and its use in seismic design of steel building structures
15. J. L. Beck, M. Muto: Bayesian updating and model class selection of deteriorating hysteretic structural models using recorded seismic response
16. J. P. Conte, M. Barbato, Q. Gu: Finite element response sensitivity, probabilistic response and reliability analyses
17. B. Jeremic and G. Jie: Parallel SoilÿFoundationÿStructure Interaction Computations
18. Y. Tsompanakis: Dynamic interaction of retaining walls and retained soil and structures
19. J. K. Kim, J.H. Lee: Earthquake response of liquid tanks installed in saturated transversely isotropic soil
20. A. Rafiee, M. Vinches, C. Bohatier: Application of the NSCD method to the modelling of fractured rock mass subjected to seismic loadings
21. D.C. Charnpis: Optimum design of multistorey structures with compound seismic isolation
22. C.C. Mitropoulou, N.P. Bakas, N.D. Lagaros and M. Papadrakakis: Advances in design optimization of reinforced concrete structural systems
23. J.E. Hurtado, N Aguirre: Robust stochastic optimal control of seismically excited buildings
24. G. C. Marano, S. Scogbba, R. Greco: A multi-objective robust criterion for tuned mass dampers optimal design
25. O. Mÿller, L. Quiroz, M. Rubinstein, R.O. Foschi: Performance-based seismic optimization implementing neural

networks

26. H. A. Jensen, M. A. Valdebenito: A very efficient computational procedure for the reliability-based optimization of uncertain stochastic linear dynamical systems
