Contents

Keynotes to the series
Preface & acknowledgements
Contributors

Part I. Feed additives and bioactive components in animal nutrition
1. Intestinal fermentation: dietary and microbial interactions, by A. Piva, F. Galvano, G. Biagi and G. Casadei
2. Fermentable carbohydrates: potential dietary modulators of intestinal physiology, microbiology and immunity in pigs, by E. Bauer, B.A. Williams, M.W.A. Verstegen and R. Mosenthin
6. Inorganic feed additives, by J. Pallauf and A.S. MĂ¶ller
8. Control of intestinal diseases by dietary supplementation with antibodies, by T. Stefaniak
9. Legal aspects for functional feed ingredients in the EC, by J. Zentek and M. Lahrssen-Wiederholt

Part II. Nutrition in relation to immune response and health
10. Handling of dietary antigens: nutritional interactions with the gut immune function, by J. Zentek
11. Immune response and nutrient intake, by P. Bosi and P. Trevisi
12. Dietary manipulation of infectious bowel disease, by D.E. Hopwood, J.R. Pluske and D.J. Hampson
13. Feeding and disease resistance in fish, by R. WaagbĂł

Part III. Antinutrients in animal nutrition
14. Effects of antinutritional factors and mycotoxins on feed intake and on the morphology and function of the digestive system, by J.P.F. Dâ€™Mello
15. Decontamination and detoxification of mycotoxins, by J. Leibetseder
PART IV. Biotechnological, molecular and ecophysiological aspects of nutrition
17. GMO in animal nutrition: potential benefits and risks, by A. Pusztai and S. Bardocz
18. Genetic influences on nutrient utilization in growing farm animals, by C.F.M. de Lange and K.C. Swanson
20. Manipulation of the ecosystem of pigs through biotechnology, by C. Moran
21. Manipulation of the poultry ecosystem through biotechnology, by S. Smulikowska
