Table of Contents

I. Overview of skin and mucosa innate immunity: history, ethics and science.

2. Ethical responsibilities in formulating, marketing and using antimicrobial products (Kenneth Richman).
3. Stratum corneum structural and functional contributions to cutaneous antimicrobial defense (Peter Elias).

II. Antimicrobial lipids and peptides.

5. Resident microflora and antimicrobial peptides of skin (Shamim Ansari).
6. Diffensins (Neelam Muizzudin).
7. Antimicrobial peptides of skin and oral mucosa (Whasun Oh Chung and Henrik Dommisch).
8. Vernix Caseosa and Innate Immunity (Steven B. Hoath, MD, Vivek Narendran, MD, Marty O. Visscher, PhD).

III. Host cellular components of innate immunity.

IV. Innate immunity response to stress and aging.

12. Epidermis as a shield from radiation and oxidative stress (Giuseppe Valacchi).
13. The impact to skin’s innate immunity by cosmetic products applied to skin and scalp (Rudranath Persau and Thomas Re).
14. UV induced immunosuppression of skin (Roger L. McMullen).

V. Innate immunity microbial challenges.

15. Deranged Anti-microbial Barrier in Atopic Dermatitis: Roles of Sphingosine, Hexadecenoic Acid and Beta-Defensine-2 (Gengi Imokawa).
16. Resident microflora of skin and oral mucosa (David Drake).
17. Corynebacterium species and their role in the generation of human malodor (Carol Bratt and Nava Dayan).
