Table of Contents

**Part I: History and Current Status of the Study of Physical Activity and Health**

**Chapter 1: Why Study Physical Activity and Health?**

*Claude Bouchard, PhD; Steven N. Blair, PED; and William L. Haskell, PhD*

Human Evolution, History, and Physical Activity

Burden of Chronic Diseases

Health and Its Determinants

Aging and Health

Defining Physical Activity and Physical Fitness

Physical Inactivity Versus Physical Activity

Summary

Review Materials

**Chapter 2: Historical Perspectives on Physical Activity, Fitness, and Health**

*Russell R. Pate, PhD*

Early Beliefs About Physical Activity and Health

Scientific Inquiry on Exercise and Health

Evolution of Physical Activity Guidelines

Summary

Review Materials

**Chapter 3: Physical Activity and Fitness With Age, Sex, and Ethnic Differences**

*Peter T. Katzmarzyk, PhD, FACSM*

Physical Activity

Physical Fitness

Summary

Review Materials

**Chapter 4: Sedentary Behavior and Inactivity Physiology**

*Marc Hamilton, PhD; and Neville Owen, PhD*

Sedentary Behavior, Physical Activity, and Public Health

Inactivity Physiology: The Underlying Biology of Acute and Chronic Muscular Inactivity

Sedentary Behavior and Metabolic Health: Emerging Epidemiological Evidence

Humans May Not Have Reached the Pinnacle of Physical Inactivity

A Comprehensive Sedentary Behavior Research Agenda

Public Health Implications
Summary

Review Materials

Part II: Effects of Physical Activity on the Human Organism

Chapter 5: Metabolic, Cardiovascular, and Respiratory Responses to Physical Activity

Edward T. Howley, PhD

Relationship of Energy to Physical Activity
Oxygen Consumption and Cardiovascular and Respiratory Responses to Exercise
Effect of Training, Age, and Gender on Maximal Oxygen Uptake
Application to Exercise Training and Physical Activity Interventions

Summary

Review Materials

Chapter 6: Acute Responses to Physical Activity and Exercise

Adrianne E. Hardman, MSc, PhD

Lipids and Lipoproteins
Endothelial Function
Insulin–Glucose Dynamics
Blood Pressure
Hematological Changes
Immune Function and Inflammation
Responses Related to Energy Balance
Augmentation of Acute Effects by Training

Summary

Review Materials

Chapter 7: Hormonal Response to Regular Physical Activity

Peter A. Farrell, PhD

Defining Hormones
Importance of Hormonal Regulation
Regular Physical Activity and Hormonal Adaptations

Summary

Review Materials

Chapter 8: Skeletal Muscle Adaptation to Regular Physical Activity

Howard J. Green, PhD

Skeletal Muscle and Human Survival
Muscle Cell: Composition, Structure, and Function
Muscle Fiber Types and Subtypes
Muscle Adaptation and Functional Consequences
Aging Muscle: The Role of Training

Summary

Review Materials
Chapter 9: Response of Liver, Kidney, and Other Organs and Tissues to Regular Physical Activity

Roy J. Shephard, MB, BS, MD (London), PhD, DPE

Acute Effects of Physical Activity

Chronic Effects of Physical Activity

Strengths and Limitations of the Current Evidence

Summary

Review Materials

Part III: Physical Activity, Fitness, and Health

Chapter 10: Physical Activity, Fitness, and Mortality Rates

Michael J. LaMonte, PhD; and Steven N. Blair, PED

Physical Activity and Mortality

Fitness and Mortality

Activity or Fitness and Mortality in Adults With Existing Diseases

Quantifying the Population Mortality Burden of Inactivity

Summary

Review Materials

Chapter 11: Physical Activity, Fitness, and Cardiac, Vascular, and Pulmonary Morbidities

Ian Janssen, PhD

Low Physical Activity and Low Cardiorespiratory Fitness as Risk Factors for Cardiovascular Morbidities

Low Physical Activity and Low Cardiorespiratory Fitness as Risk Factors for Pulmonary Morbidities

Biological Mechanisms

Role of Physical Activity in Patients with Cardiac, Vascular, and Pulmonary Morbidities

Summary

Review Materials

Chapter 12: Physical Activity, Fitness, and Obesity

Robert Ross, PhD; and Ian Janssen, PhD

Definition and Problem of Overweight and Obesity

Fat Depots

Relationships Among Excess Weight, Physical Activity, and Fitness

Role of Physical Activity in Prevention and Treatment of Excess Weight

Summary

Review Materials

Chapter 13: Physical Activity, Fitness, and Diabetes Mellitus

R. Jan-Willem Middelbeek, MD, MS; Oscar Alcazar, PhD; and Laurie J. Goodyear, PhD

Diabetes: Definitions and Prevalence

Epidemiology, Etiology, and Complications of Type 2 Diabetes

Impact of Physical Activity on Insulin and Glucose Metabolism

Epidemiological Evidence Indicating Benefits of Physical Activity in Preventing Type 2 Diabetes
Summary of Randomized Controlled Trials on the Prevention of Type 2 Diabetes

Importance of Regular Physical Activity for People With Type 2 Diabetes

Summary

Review Materials

**Chapter 14**: Physical Activity, Fitness, and Cancer

*I-Min Lee, MBBS, ScD*

Importance of Cancer

How Physical Activity and Physical Fitness Decrease the Risk of Developing Cancer

How We Study Whether Physical Activity and Physical Fitness Decrease the Risk of Developing Cancer

Physical Activity, Physical Fitness, and Site-Specific Cancers

Physical Activity and Cancer Survivors

Summary

Review Materials

**Chapter 15**: Physical Activity, Fitness, and Joint and Bone Health

*Jennifer Hootman, PhD, ATC, FACSM, FNATA*

Scientific Evidence

Strengths and Limitations of the Evidence

Summary

Review Materials

**Chapter 16**: Physical Activity, Muscular Fitness, and Health

*Neil McCartney, PhD; and Stuart Phillips, PhD*

History of Resistance Training and Its Role in Health

Fundamental Aspects of Resistance Training

Resistance Training Throughout the Life Span

Resistance Training in Disease and Disability

Summary

Review Materials

**Chapter 17**: Physical Activity, Fitness, and Children

*Thomas Rowland, MD*

Understanding the Exercise–Health Link in Children

Defining the Kinds and Amount of Physical Activities for Health

Optimal Intervention Strategies

Biological Effects on Physical Activity in Youth

Summary

Review Materials

**Chapter 18**: Risks of Physical Activity

*Evert A.L.M. Verhagen, PhD; Esther M.F. van Sluijs, PhD; and Willem van Mechelen, MD, PhD*

Risks of Physical Activity and Sport Participation

Minimizing Risk and Maximizing Benefits
Recommendations for Future Research

Summary

Review Materials

**Part IV: Physical Activity, Fitness, Aging, and Brain Functions**

**Chapter 19: Physical Activity, Fitness, and Aging**

*Loretta DiPietro, PhD, MPH*

The Aging Process

Methodological Considerations in Aging Research

Demographics of Physical Activity Among Older Adults

Dimensions of Physical Activity and Their Relationship to Health and Function in Aging

Programmatic Issues in Promoting Physical Activity in Older Populations

Summary

Review Materials

**Chapter 20: Physical Activity and Brain Functions**

*Kirk I. Erickson, PhD*

Descriptive Questions

Mechanistic Questions

Applied Questions: Populations Benefiting From Physical Activity

Moderating Questions: Factors Moderating the Effect of Physical Activity

Summary

Review Materials

**Chapter 21: Exercise and Its Effects on Mental Health**

*John S. Raglin, PhD; and Gregory S. Wilson, PED, FACSM*

Research Paradigms of Exercise and Mental Health Research

Exercise and Depression

Exercise and Anxiety

Exercise and Schizophrenia

Putative Mechanisms for the Psychological Benefits of Exercise

Detrimental Psychological Responses to Exercise: The Overtraining Syndrome

Summary

Review Materials

**Part V: How Much Is Required and How Do We Get There?**

**Chapter 22: Dose–Response Issues in Physical Activity, Fitness, and Health**

*William L. Haskell, PhD*

Principles Guiding the Body’s Response to Activity

Components of the Physical Activity Dose

Factors Determining Optimal Activity Dose

Physical Activity and Fitness: Dose for Health Benefits
Chapter 23: From Science to Physical Activity Guidelines
Mark S. Tremblay, PhD; and William L. Haskell, PhD

Stages of Physical Activity Guideline Development
Strengths, Limitations, and Challenges

Summary

Chapter 24: Genetic Differences in the Relationships Among Physical Activity, Fitness, and Health
Tuomo Rankinen, PhD; and Claude Bouchard, PhD

Basics of Human Genetics
Events in Human Genes and Genomes
Genetic Variation in Exercise Traits Among Sedentary People
Genetics of Physical Activity Level
Individual Differences in Response to Regular Exercise
Genes and Responses to Exercise
Trait-Specific Response to Exercise
Personalized Exercise Medicine

Summary

Chapter 25: An Integrated View of Physical Activity, Fitness, and Health
William L. Haskell, PhD; Steven N. Blair, PED; and Claude Bouchard, PhD

Physical Activity Versus Inactivity: Universal Value Versus Damaging Consequences
Developing and Implementing Physical Activity Plans
Research Questions and Issues

Summary

Review Materials
