Table of Contents

Chapter 1: Overview
General Perspectives on Measurement
Historical Origins of Measurement in Social Science
Later Developments in Measurement
The Role of Measurement in the Social Sciences
Summary and Preview

Chapter 2: Understanding the "Latent Variable"
Constructs Versus Measures
Latent Variable as the Presumed Cause of Item Values
Path Diagrams
Further Elaboration of the Measurement Model
Parallel "Tests"
Alternative Models
Exercises

Chapter 3: Reliability
Continuous Versus Dichotomous Items
Internal Consistency
Reliability Based on Correlations Between Scale Scores
Generalizability Theory
Summary and Exercises

Chapter 4: Validity
Content Validity
Criterion-related Validity
Construct Validity
What About Face Validity?
Exercises

Chapter 5: Guidelines in Scale Development
Step 1: Determine Clearly What it Is You Want to Measure
Step 2: Generate an Item Pool
Step 3: Determine the Format for Measurement
Step 4: Have Initial Item Pool Reviewed by Experts
Step 5: Consider Inclusion of Validation Items
Step 6: Administer Items to a Development Sample
Step 7: Evaluate the Items
Step 8: Optimize Scale Length
Exercises

Chapter 6: Factor Analysis
Overview of Factor Analysis
Conceptual Description of Factor Analysis
Interpreting Factors
Principal Components vs Common Factors
Confirmatory Factor Analysis
Using Factor Analysis in Scale Development
Sample Size
Conclusion

Chapter 7: An Overview of Item Response Theory
Item Difficulty
Item Discrimination
False Positives
Item Characteristic Curves
Complexities of IRT
When to Use IRT
Conclusions

Chapter 8: Measurement in the Broader Research Context
Before the Scale Development
After the Scale Administration
Final Thoughts
