

High-Yield Cell and Molecular Biology

Dudek, Ronald W. PhD

ISBN-13: 9780781768870

Table of Contents

The Cell Membrane: Eicosanoids and Receptors/Signal Transduction

- I. The Lipid Component of the Cell Membrane
- II. The Protein Component of the Cell Membrane
- III. Membrane Transport Proteins
- IV. G-Protein-Linked Receptors
- V. Types of G-Protein-Linked Receptors
- VI. Enzyme-Linked Receptors
- VII. Low-Density Lipoprotein (LDL) Receptor
- VIII. Summary Table

Cytoplasm and Organelles

- I. Cytoplasm
- II. Ribosomes
- III. Rough Endoplasmic Reticulum
- IV. Golgi Complex
- V. Smooth Endoplasmic Reticulum (sER)
- VI. Mitochondria
- VII. Lysosomes
- VIII. Peroxisomes
- IX. Cytoskeleton
- X. Cell Inclusions
- XI. Selected Photomicrographs

Nucleus

- I. Nuclear Envelope
- II. Apoptosis
- III. Nucleolus
- IV. Assembly of the Ribosome

Protein Synthesis

- I. General Features
- II. Transcription
- III. Processing the RNA Transcript into mRNA
- IV. Translation
- V. Clinical Considerations

Chromosomal DNA

- I. The Biochemistry of Nucleic Acids
- II. Levels of DNA Packaging
- III. Centromere
- IV. Heterochromatin and Euchromatin
- V. Studying Human Chromosomes
- VI. Staining of Chromosomes
- VII. Chromosome Morphology

Numerical Chromosomal Anomalies

- I. Polyploidy
- II. Mixoploidy
- III. Aneuploidy
- IV. Selected Photographs

Structural Chromosomal Abnormalities

- I. Deletions
- II. Microdeletions
- III. Translocations
- IV. Unstable Expanding Repeat Mutations (Dynamic Mutations)
- V. Isochromosomes
- VI. Inversions
- VII. Breakage

VIII. Selected Photographs

Chromosome Replication and DNA Synthesis

- I. General Features
- II. The Replication Process
- III. The Telomere
- IV. Types of DNA Damage and DNA Repair
- V. Summary of DNA Replication Machinery

Meiosis and Genetic Recombination

- I. Meiosis
- II. Oogenesis: Female Gametogenesis
- III. Spermatogenesis: Male Gametogenesis
- IV. Genetic Recombination

The Human Nuclear Genome

- I. General Features
- II. Protein-Coding Genes
- III. RNA-Coding Genes
- IV. Epigenetic Control
- V. Non-Coding DNA

The Human Mitochondrial Genome

- I. General Features
- II. Protein-Coding Genes
- III. RNA-Coding Genes
- IV. Other Mitochondrial Proteins
- V. Mitochondrial Diseases

Control of Gene Expression

- I. General Features
- II. Mechanism of Gene Expression
- III. The Structure of Transcription Factors, Gene Regulatory Proteins, and Other Trans-Acting Factors
- IV. Clinical Considerations
- V. Other Mechanisms of Gene Expression
- VI. The lac Operon
- VII. The trp Operon

Mutations of the DNA Sequence

- I. General Features
- II. Silent (Synonymous) Mutations
- III. Non-Silent (Nonsynonymous) Mutations
- IV. Loss of Function and Gain of Function Mutations
- V. Other Types of Polymorphisms

Proto-Oncogenes, Oncogenes, and Tumor-Suppressor Genes

- I. Definitions
- II. Designations
- III. Proto-Oncogenes and Oncogenes
- IV. Tumor Suppressor Genes
- V. Molecular Pathology of Colorectal Cancer

The Cell Cycle

- I. Phases of the Cell Cycle
- II. Control of the Cell Cycle
- III. Stages of the M (Mitosis) Phase

Molecular Biology of Cancer

- I. The Causes of Cancer
- II. The Six Superpowers of a Cancer Cell

Homeotic Genes and Anterior/Posterior Body Pattern Formation

- I. Introduction
- II. Human Homeotic Genes

The Human Mitochondrial Genome
