

Molecular Driving Forces: Statistical Thermodynamics in Chemistry and Biology

Dill, Ken A.

ISBN-13: 9780815320517

Table of Contents

Preface

Acknowledgements

1. Principles of Probability
 2. Extremum Principles Predict Equilibria
 3. Heat, Work & Energy
 4. Math Tools: Series and Approximations
 5. Multivariate Calculus
 6. Entropy & the Boltzmann Distribution Law
 7. Thermodynamic Driving Forces
 8. Free Energies
 9. Maxwell's Relations & Mixtures
 10. Boltzmann Distribution Law
 11. Statistical Mechanics of Simple Gases and Solids
 12. Temperature, Heat Capacity
 13. Chemical Equilibria
 14. Equilibria Between Liquids, Solids, and Gases
 15. Solutions and Mixtures
 16. Solvation and Transfers of Molecules Between Phases
 17. Vector Calculus
 18. Physical Kinetics
 19. Chemical Kinetics & Transition States
 20. Coulomb's Law
 21. The Electrostatic Potential
 22. Electrochemical Equilibria
 23. Salt Ions Shield Charged Objects
 24. Intermolecular Interactions
 25. Phase Transitions
 26. Cooperativity
 27. Adsorption, Binding & Catalysis
 28. Multi-site Cooperative Ligand Binding
 29. Water
 30. Water as a Solvent
 31. Polymer Solutions
 32. Polymer Elasticity
 33. Polymers Resist Confinement & Deformation
- App. A: Table of Constants
- App. B: Table of Units
- App. C: Useful Taylor Series Expansions
- App. D: Useful Integrals
- App. E: Multiples of Units, Their Names, and Symbols
- Index
