# Handbook of Railway Vehicle Dynamics

Iwnicki, Simon

## Table of Contents

**Introduction**: Simon Iwnicki
- Aims
- Introduction to the Aims of Handbook
- Structure of the Handbook

**A History of Railway Vehicle Dynamics**: Alan Wickens
- Introduction
- Coning and the Kinematic Oscillation
- Concepts of Curving
- Hunting and the Empirical Development of the Bogie
- Interaction between Vehicle and Track
- Innovations for Improved Steering
- Carter
- Wheel–Rail Geometry
- Matsudaira
- The ORE Competition
- Creep
- The Complete Solution of the Hunting Problem
- Modern Research on Curving
- Dynamic Response to Track Geometry
- Suspension Design Concepts and Optimisation
- Derailment
- The Development of Computer Simulation
- Active Suspensions
- The Expanding Domain of Rail Vehicle Dynamics
- References

**The Anatomy of Railway Vehicle Running Gear**: Anna Orlova and Yuri Boronenko
- Main Functions of the Running Gear and Terminology
- Bogie Components
- Common Passenger Vehicle Bogie Designs
- Common Freight Wagon Bogie Designs
- Common Tram Bogie Designs
- Principles of Selecting Suspension Parameters
- Advanced Bogie Designs
- References

**Wheel–Rail Contact**: Jean Bernard Ayasse and Hugues Chollet
- Introduction
- The Normal Contact
- The Tangent Problem
- Contact Forces in the Railway Context
- Appendix 4.1: Kinematic Movement: The Klingel Formula
- Appendix 4.2: Kinematic Hunting and Equivalent Conicity
- Appendix 4.3: The Circle Theory
- Appendix 4.4: Analysis of Y/Q and Nadal’s Criteria
- Nomenclature
- References

**Tribology of the Wheel–Rail Contact**: Ulf Olofsson and Roger Lewis
- Introduction
- Contact Conditions at the Wheel–Rail Contact
- Wear and Other Surface Damage Mechanisms
- Friction
- Lubrication and Surface Coatings
- Acknowledgments
- References

**Track Issues**: Tore Dahlberg
- The Railway Track as a Dynamic System
- Function of the Track
- Dynamic Properties of the Track
- Dynamic Properties of Track Components
- Summary
