Sleep Deprivation, Stimulant Medications and Cognition

Wesensten

Table of Contents

Foreword: sustaining cognitive performance: a modern imperative David Dinges

Part I. Basic Mechanisms: Cognitive Performance and Sleep:

1. The true nature of sleep loss-induced 'neurocognitive performance deficits' ? a critical appraisal Thomas J. Balkin
2. Using fMRI to study cognitive function and its modulation in sleep deprived persons ? a selective overview Michael W. L. Chee and Su Mei Lee
3. The neurochemistry of cognitive impairment following sleep loss Robert E. Strecker and James T. McKenna
4. The genetic basis of individual vulnerability to sleep loss Phillip J. Quartana and Tracy L. Rupp

Part II. Stimulant Reversal of Cognitive Deficits:

5. Modafinil reversal of cognitive deficits during sleep loss Nancy J. Wesensten
6. Utility of caffeine: evidence from the laboratory Michael H. Bonnet and Donna L. Arand
7. Caffeine: mechanism of action, genetics and behavioural studies conducted in task simulators and the field Christina E. Carvey, Lauren A. Thompson, Caroline R. Mahoney and Harris R. Lieberman
8. Stimulants in models of shift work and shift work disorder Jonathan R. L. Schwartz and Aaron M. Henley
9. The potential for abuse of stimulants in chronically sleep-restricted populations Emma Childs and Harriet de Wit
10. Cognition enhancers versus stimulants Megan St Peters and Martin Sarter
11. Novel pathways for stimulant development: the histaminergic system John J. Renger

Part III. Alternatives for Sustaining Cognitive Performance During Sleep Loss:

13. Light exposure for improving cognition during sleep loss and circadian misalignment Kenneth P. Wright, Jr, Tina M. Burke and Mark R. Smith
14. Nutritional countermeasures for cognitive performance decrements following sleep deprivation Caroline R. Mahoney and Harris R. Lieberman
15. The role of alertness monitoring in sustaining cognition during sleep loss Melissa M. Mallis and Francine O. James
16. Sustaining neurobehavioral performance on less sleep: is SWS enhancement the key? Janine M. Hall-Porter and James K. Walsh

Part IV. Summary and Conclusions:

17. Use of stimulants in operational settings: issues and considerations Nicholas Davenport, Cheryl Lowry and Brian Pinkston
18. Fatigue management: the art of the state Tracy L. Rupp, Nancy J. Wesensten and Thomas J. Balkin.
