Table of Contents

Section One - Patient evaluation.
Overview.
Pre-urodynamic evaluation.

Section Two - Techniques.
Cystometry.
Leak Point Pressure.
Uroflowmetry.
Electromyography.
Urethral pressure measurement.
Synchronous pressure/uroflow.
Video-urodynamics.
Sphincter electromyography.

Section Three - Diagnosis.
A Neuro-urology.
Normal and abnormal physiology of micturition.
Spinal cord injury.
Cerebrovascular accident, Parkinson's Disease and other intracranial diseases.
Multiple sclerosis and other demyelinating disorders.
Diabetes Mellitus.
Cauda equina, Infections and other spinal diseases.
B Male voiding disorders.
BPH, bladder neck obstruction and prostatitis.
Post-prostatectomy incontinence.
C Female Urology.
Stress incontinence.
Mixed incontinence.
Overactive bladder.
Bladder outlet obstruction.
Pelvic organ prolapse.
Leak point pressure in stress incontinence.
Painful bladder syndrome and interstitial cystitis.
D Pediatrics, geriatrics and bladder reconstruction.
Pediatric urodynamics.

Geriatric urodynamics.

Urodynamic evaluation of urinary tract reconstruction.

Appendix.

ICS recommendations on good urodynamic practice
