Table of Contents

Chapter 1: Indications, Procedure, Image Planes and Doppler Flows Transesophageal Echocardiography
Chapter 2: Monitoring Ventricular Function in the Operating Room
Chapter 3: Contrast Ultrasound Imaging
Chapter 4: Three Dimensional Echocardiography
Chapter 5: Tissue Doppler and Speckle Tracking Echocardiography
Chapter 6: Intracardiac Echocardiography
Chapter 7: Intravascular ultrasound: Principles and clinical applications
Chapter 8: Hand-Carried Ultrasound
Chapter 9: Quantitative evaluation of left ventricular structure, wall stress, and systolic function.
Chapter 10: Ventricular Shape and Function
Chapter 11: Assessment of Diastolic Function by Echocardiography
Chapter 12: Echocardiographic Digital Image Processing and Approaches to Automated Border Detection
Chapter 13: The role of echocardiographic evaluation in patients presenting with acute chest pain in the emergency room
Chapter 14: Echocardiography in the coronary care unit: Management of Acute Myocardial Infarction, Detection of Complications, and Prognostic Implications
Chapter 15: Exercise echocardiography
Chapter 16: Stress Echocardiography with Nonexercise Techniques
Chapter 17: Echocardiographic Evaluation of Coronary Blood Flow: Approaches and Clinical Applications
Chapter 18: Quantitation of valvular regurgitation
Chapter 19: Timing of Intervention for Chronic Valve Regurgitation: The Role of Echocardiography
Chapter 20: Intraoperative echocardiography in mitral valve repair.
Chapter 21: Echocardiography in the patient undergoing catheter balloon mitral valvuloplasty: patient selection, hemodynamic results, complications and long-term outcome.
Chapter 22: Clinical decision-making in patients with endocarditis: the role of echocardiography
Chapter 23: Aortic Stenosis:Echocardiographic Evaluation of Disease Severity, Disease Progression, and the Role of Echocardiography in Clinical Decision Making
Chapter 24: Fluid dynamics of prosthetic valves
Chapter 25: Echocardiographic recognition and quantitation of prosthetic valve dysfunction
Chapter 26: Echocardiographic Recognition of Unusual Complications After Surgery on the Great Vessels and Cardiac Valves
Chapter 27: Doppler Echocardiography in Heart Failure and Cardiac Resynchronization
Chapter 28: Echocardiography in the evaluation and management of patients with hypertrophic cardiomyopathy.
Chapter 29: Restrictive cardiomyopathy: diagnosis and prognostic implications.

Chapter 30: Pericardial Disease

Chapter 31: End stage heart failure: ventricular assist devices and the post-transplant patient.

Chapter 32: Role of Echocardiography in the Diagnosis and Management of Heart Disease in Pregnancy

Chapter 33: Aortic dissection and trauma: Value and Limitations of echocardiography

Chapter 34: Hypertension: Impact of Echocardiographic Data on the Mechanism of Hypertension, Treatment, Options, Prognosis, and Assessment of Therapy

Chapter 35: Echocardiographic Findings in Acute and Chronic Respiratory Disease

Chapter 36: Echocardiographic findings in systemic diseases characterized by immune-mediated injury.

Chapter 37: Echocardiography in the evaluation of cardiac disease due to Endocrinopathies, Renal Disease, Obesity and Nutritional Deficiencies.

Chapter 38: Echocardiography in patients with inherited connective tissue disorders

Chapter 39: Aging changes seen on echocardiography

Chapter 40: Echocardiographic evaluation of the patient with a systemic embolic event.

Chapter 41: The Role of Echocardiography in Atrial Fibrillation and Flutter

Chapter 42: General echocardiographic approach to the adult with suspected congenital heart disease

Chapter 43: Echocardiographic Evaluation of the Adult with Unoperated Congenital Heart Disease

Chapter 44: Echocardiographic evaluation of the adult patient with post-operative congenital heart disease.

Chapter 45: Cardiac tumors
