

Organic Chemistry: An Acid-Base Approach

Smith, Michael B.

ISBN-13: 9781420079203

Table of Contents

Introduction

A Brief History of Organic Chemistry
The Variety and Beauty of Organic Molecules
Why Is an Acid-Base Theme Important?
Acids and Bases in General Chemistry
Acids and Bases in Organic Chemistry
How Are the Two Acid-Base Definitions Related?
Acid and Base Strength
Lewis Acids and Lewis Bases
Why Is Acid-Base Chemistry a Theme for Organic Chemistry?
Biological Relevance

Bonding

The Elements
What Is a Chemical Bond? Ionic versus Covalent
The Covalent Carbon-Carbon Bond
Molecular Orbitals
Tetrahedral Carbons and sp^3 Hybridization
How Strong Is a Covalent Bond? Bond Dissociation Energy
Polarized Covalent s-Bonds
Biological Relevance

Alkanes, Isomers, and an Introduction to Nomenclature

The Fundamental Structure of Alkanes Based on the sp^3 Hybrid Model
Millions of Hydrocarbons: Alkanes
Combustion Analysis and Empirical Formulas
The Acid or Base Properties of Alkanes
Isomers
Naming Millions of Isomers: Rules of Nomenclature. The IUPAC Rules of Nomenclature
Rings Made of Carbon. Cyclic Compounds
Biological Relevance

Functional Groups

Introducing a Functional Group: Alkenes
Another Hydrocarbon Functional Group: Alkynes
Hydrocarbons with Several Multiple Bonds
Reactivity of Polarized Covalent s-Bonds
Formal Charge
Heteroatom Functional Groups
Acid-Base Properties of Functional Groups
Polarity and Intermolecular Forces
Functional Groups with Polarized p-Bonds
Benzene: A Special Cyclic Hydrocarbon
Biological Relevance

Acids, Bases, Nucleophiles, and Electrophiles

Acid-Base Equilibria
Polarized Hydrogen-Heteroatom Bonds: Acidic Units
Factors That Influence the Strength of a Brønsted-Lowry Acid
Organic Bases
Lewis Acids and Lewis Bases
A Positive Carbon Atom Can Accept Electrons
Nucleophiles
Biological Relevance

Chemical Reactions, Bond Energy, and Kinetics

A Chemical Reaction
Bond Dissociation Enthalpy and Reactions
Transition States
Reactive Intermediates
Free Energy. Influence of Enthalpy and Entropy
Energetics. Starting Materials, Transition States, Intermediates, and Products on a Reaction Curve
Competing Reactions
Mechanisms

Why Does a Chemical Reaction Occur? Defining a "Reactive" Center

Reversible Chemical Reactions

Kinetics

No Reaction

Biological Relevance

Rotamers and Conformation

Rotamers

Longer Chain Alkanes: Increased Torsional Strain

Conformations of Alkenes and Alkynes: Introducing p-Bonds

Influence of Heteroatoms on the Rotamer Population

Cyclic Alkanes

Substituted Cyclohexanes

Larger Rings

Cyclic Alkenes

Introducing Heteroatoms into a Ring

Biological Relevance

Stereoisomers: Chirality, Enantiomers, and Diastereomers

Stereogenic Carbons and Stereoisomers

Specific Rotation: A Physical Property

Absolute Configuration (R and S Nomenclature)

Alkenes

Diastereomers

Stereogenic Centers in Cyclic Molecules

Stereogenic Centers in Complex Molecules

Optical Resolution

Biological Relevance

Acid-Base Reactions of p-Bonds

Alkenes and Acid-Base Chemistry

Carbocation Intermediates

Alkenes React with Weak Acids in the Presence of an Acid Catalyst

Alkenes React as Lewis Bases

Alkenes React as Lewis Bases with Electrophilic Oxygen. Oxidation of Alkenes to Oxiranes

Alkynes React as Brønsted-Lowry Bases or Lewis Bases

Reactions That Are Not Formally Acid-Base Reactions

Non-ionic Reactions: Radical Intermediates and Alkene Polymerization

Synthetic Transformations

Biological Relevance

Nucleophiles: Lewis Base-Like Reactions at sp³ Carbon

Alkyl Halides, Sulfonate Esters, and the Electrophilic C-X Bond

Nucleophiles and Bimolecular Substitution (the S_N2 Reaction)

Functional Group Transformations via the S_N2 Reaction

A Tertiary Halide Reacts with a Nucleophile When the Solvent Is Water

Carbocation Rearrangements

Solvolysis Reactions of Alkyl Halides

Preparation of Halides and Sulfonate Esters by Substitution Reactions

Reactions of Ethers

Free Radical Halogenation of Alkanes

Applications to Synthesis

Biological Relevance

Base-Induced Elimination Reactions

Bimolecular Elimination

Stereochemical Consequences of the E₂ Reaction

The E₂ Reaction in Cyclic Molecules

Unimolecular Elimination

Intramolecular Elimination

1,3 Elimination: Decarboxylation

Elimination Reactions of Vinyl Halides: Formation of Alkynes

Elimination Functional Group Exchanges

Biological Relevance

Substitution and Elimination Reactions Can Compete

A Few Simplifying Assumptions

Protic versus Aprotic and Water

Nucleophilic Strength versus Base Strength

The Nature of the Halide

What about Secondary Halides?

Strength and Limitations of the Simplifying Assumptions

When Do the Assumptions Fail?

Spectroscopic Methods of Identification

Light and Energy

Mass Spectrometry

Infrared Spectroscopy

Nuclear Magnetic Resonance Spectroscopy
The Structure of an Unknown Molecule May Be Determined
Carbon-13 NMR Spectroscopy: Counting the Carbons
Biological Relevance

Organometallic Reagents

Introducing Magnesium into a Molecule
Reaction of Aryl and Vinyl Halides with Magnesium
Grignard Reagents Are Bases
Grignard Reagents Are Poor Nucleophiles with Alkyl Halides
Organolithium Reagents
Organocuprates
Organometallic Disconnections
Biological Relevance

Carbonyl Compounds: Structure, Nomenclature, Reactivity

The Carbonyl Group
Aldehydes and Ketones. Nomenclature
Chemical Reactivity of Ketones and Aldehydes
Carboxylic Acids. Nomenclature and Properties
Dicarboxylic Acids
Dicarboxylic Acids Have Two pKa Values
Carboxylic Acid Derivatives. Nomenclature and Properties
Acyl Substitution with Carboxylic Acid Derivatives
Sulfonic Acids
Biological Relevance

Oxidation

Defining an Oxidation
Oxidation of Alcohols with Chromium(VI)
Oxidation of Alkenes
Oxidative Cleavage
Summary of Functional Group Exchanges
Biological Relevance

Reactions of Aldehydes and Ketones

Chemical Reactivity of the Carbonyl Group
Reversible versus Irreversible Acyl Addition
Reaction of Aldehydes or Ketones with Strong Nucleophiles
Organometallic Reagents Are Nucleophiles
Water: A Weak Nucleophile That Gives Reversible Acyl Addition
Alcohols: Neutral Nucleophiles That Give Reactive Products
Amines Are Nucleophiles That React to Give Imines or Enamines
Carbon-Carbon Bond-Forming Reactions and Functional Group Modification
Biological Relevance

Reduction

Defining a Reduction
Hydrides as Reducing Agents
Catalytic Hydrogenation
Dissolving Metal Reductions
Summary of Functional Group Exchanges
Biological Relevance

Carboxylic Acid Derivatives and Acyl Substitution

Chemical Reactivity of Carboxylic Acid Derivatives
Acyl Substitution. Acid Derivatives React with Water: Hydrolysis
Preparation of Acid Chlorides
Preparation of Acid Anhydrides
Preparation of Esters
Amides
The Reaction of Carboxylic Acid Derivatives with Carbon Nucleophiles
Reaction of Organometallics with Other Electrophilic "Carbonyl" Molecules
Dicarboxylic Acid Derivatives
Baeyer-Villiger Oxidation
Sulfonic Acid Derivatives
Sulfate Esters and Phosphate Esters
Nitriles Are Carboxylic Acid Derivatives
Carbon-Carbon Bond-Forming Reactions and Functional Group Exchanges of Acid Derivatives
Biological Relevance

Aromatic Compounds and Benzene Derivatives

Benzene and Aromaticity
Functionalized Benzene Derivatives and a New Nomenclature System
Electrophilic Aromatic Substitution
Disubstituted Benzene Derivatives
Polysubstituted Benzene Derivatives
Reduction of Aromatic Compounds

Aromaticity in Monocyclic Molecules Other Than Benzene
Polynuclear Aromatic Hydrocarbons
Aromatic Amines and Diazonium Salts
Nucleophilic Aromatic Substitution
Aromatic Disconnections and Functional Group Exchange Reactions
Synthesis of Aromatic Compounds
Biological Relevance

Enolate Anions: Acyl Addition and Acyl Substitution

Aldehydes and Ketones Are Weak Acids
Enolate Anions Are Nucleophiles. The Aldol Condensation
Non-nucleophilic Bases
Enolate Anions from Unsymmetrical Ketones
Dehydration of Aldol Products
The Intramolecular Aldol Condensation
Ester Enolates
Decarboxylation
Enolate Alkylation
Phosphorus Ylids and the Wittig Reaction
Many New Synthetic Possibilities
Biological Relevance

Difunctional Molecules: Dienes and Conjugated Carbonyl Compounds

Conjugated Dienes
Conjugated Carbonyl Compounds
Detecting Conjugation: Ultraviolet Spectroscopy
Reactions of Conjugated p-Bonds
Polymers from Conjugated Molecules
Synthetic Possibilities
Biological Relevance

Difunctional Molecules: Pericyclic Reactions

Frontier Molecular Orbitals: HOMOs and LUMOs
Reactivity of Dienes and Alkenes
Selectivity
Sigmatropic Rearrangements
Review of Synthetic Transformations
Biological Relevance

Disconnections and Synthesis

What Is Synthesis?
Specifying a Starting Material for a Given Target
The Starting Material Is Unknown
Disconnection of Molecules with Problematic Structural Features

Heteroaromatic Compounds

Nitrogen in an Aromatic Ring
Oxygen and Sulfur in an Aromatic Ring
Substitution Reactions in Heterocyclic Aromatic Compounds
Reduced Forms of Heterocycles
Heteroaromatic Compounds with More Than One Ring
Aromatic Substitution Reactions of Polycyclic Heterocycles
Synthesis of Heterocycles
Biological Relevance

Multifunctional Compounds: Amino Acids and Peptides

A Review of Reactions That Form Amines
Reactions of Amines
Difunctional Molecules: Amino Acids
Biological Relevance. Peptides Are Polyamides of Amino Acid Residues
Biological Relevance. Proteins and Enzymes Are Polypeptides
New Synthetic Methodology

Multifunctional Compounds: Carbohydrates

Polyhydroxy Carbonyl Compounds
Biological Relevance. Oligosaccharides and Polysaccharides
Reactions of Carbohydrates
Synthesis of Carbohydrates
Biological Relevance. Nucleosides and Nucleotides (Heterocycles Combined with Sugars)
Biological Relevance. Polynucleotides
Synthesis of Polynucleotides
