# Fundamentals of Natural Gas Processing

Kidnay, A

## Table of Contents

### Processing Principles
- Introduction
- Units and Conversions
- Basic Chemistry Concepts
- Specification Test Methods
- Thermodynamics

### Pumps
- Introduction
- Pump Fundamentals
- Centrifugal Pumps
- Reciprocating Pumps
- Rotary Pumps
- Pump Comparisons

### Heat Transfer
- Introduction
- Modes of Heat Transfer
- Cooling and Heating Sources
- Heat Exchanger Types
- Reboilers

### Separation Processes
- Introduction
- Distillation
- Absorption
- Column Internals
- Adsorption
- Membranes

### Phase Separation Equipment
- Gas–Liquid Separators
- Filter Separators and Coalescing Filters
- Cyclone Separators
- Liquid–Liquid Separators
- Residence Time for Various Separator Applications

### Overview of the Natural Gas Industry
- Introduction
- Sources of Natural Gas
- Composition of Natural Gas
- Classification
- Principal Products and Markets
- Product Specifications
- Combustion Characteristics

### Overview of Gas Plant Processing
- Roles of Gas Plants
- Plant Processes
- Important Support Components
- Contractual Agreements and Economics
- Operational Measures

### Field Operations and Inlet Receiving
- Introduction
- Field Operations
- Gas Hydrates
- Inlet Receiving
- Safety and Environmental Considerations
Compression
Introduction
Fundamentals
Drivers
Compressor Types
Capacity and Power Calculations
Comparison of Reciprocating and Centrifugal Compressors
Safety and Environmental Considerations

Gas Treating
Introduction
Solvent Absorption Processes
Physical Absorption
Adsorption
Cryogenic Fractionation
Membranes
Nonregenerable Hydrogen Sulfide Scavengers
Biological Processes
Safety and Environmental Considerations

Gas Dehydration
Introduction
Water Content of Hydrocarbons
Gas Dehydration Processes
Safety and Environmental Considerations

Hydrocarbon Recovery
Introduction
Process Components
Liquids Removal Processes
Safety and Environmental Considerations

Nitrogen Rejection
Introduction
Nitrogen Rejection for Gas Upgrading
Nitrogen Rejection for Enhanced Oil Recovery Using Cryogenic Distillation
Safety and Environmental Considerations

Trace Component Recovery or Removal
Introduction
Helium
Mercury
Benzene, Toluene, Ethylbenzene, and Xylenes

Liquids Processing
Introduction
Condensate Processing
NGL Processing
Safety and Environmental Considerations

Acid Gas Processing and Disposal
Introduction
Properties of Sulfur
Sulfur Recovery Processes
Sulfur Storage
Acid Gas Disposal
Safety and Environmental Considerations

Transportation and Storage
Introduction
Gas
Liquids

Liquefied Natural Gas
Introduction
Gas Treating before Liquefaction
Liquefaction Cycles
Storage of LNG
Transportation
Regasification and Cold Utilization of LNG
Economics
Safety and Environmental Considerations
Capital Costs of Gas Processing Facilities
Introduction
Basic Premises for All Plant Component Cost Data
Amine Treating
Glycol Dehydration
NGL Recovery with Straight Refrigeration (Low Ethane Recovery)
NGL Recovery with Cryogenic Processing (High Ethane Recovery) and Nitrogen Rejection
Sulfur Recovery and Tail Gas Cleanup
NGL Extraction Plant Costs for Larger Facilities
Corrections to Cost Data

Natural Gas Processing Plants
Introduction
Plant with Sweet Gas Feed and 98% Ethane Recovery
Plant with Sour Gas Feed, NGL, and Sulfur Recovery
Plant with Sour Gas Feed, NGL Recovery, and Nitrogen Rejection

Appendix A: Glossary of Gas Process Terminology
Appendix B: Physical Constants and Physical Properties

Author Index
Subject Index

Discussion Questions, Exercises, References, and Web Sites appear at the end of most chapters.
