Preface

Introduction: Frameworks for Understanding Spatial Thought (or Wrapping Our Heads Around Space)
David Waller and Lynn Nadel

I. Neuroscientific Dimensions of Spatial Cognition

1. Hippocampus and Related Areas: What the Place Cell Literature Tells Us About Cognitive Maps in Rats and Humans
   A. David Redish and Arne Ekstrom

2. Parietal Contributions to Spatial Cognition
   Raymond P. Kesner and Sarah H. Creem-Regehr

II. Online Systems: Acquisition and Maintenance of Spatial Information

3. Spatial Perception and Action
   Brett R. Fajen and Flip Phillips

4. Multisensory Contributions to Spatial Perception
   Betty J. Mohler, Massimiliano Di Luca, and Heinrich H. Bölschhoff

5. Perception of Spatial Relations During Self-Motion
   John W. Philbeck and Jesse Sargent

6. Individual and Group Differences in Spatial Ability
   Beth M. Casey

III. Offline Systems: Encoding, Storage, and Retrieval of Spatial Information

7. Spatial Memory: Place Learning, Piloting, and Route Knowledge
   Ken Cheng and Paul Graham

8. Cognitive Maps
   Lynn Nadel

9. Spatial Memory: Properties and Organization
   Timothy P. McNamara

10. The Development of Location Coding: An Adaptive Combination Account
    Mark P. Holden and Nora S. Newcombe

11. Models of Spatial Cognition
    Stephen C. Hirtle

IV. Interpersonal Dimensions of Spatial Cognition

12. I Go Right, North, and Over: Processing Spatial Language
    Holly A. Taylor and Tad T. Brunye

13. Functions and Applications of Spatial Cognition
    Daniel R. Montello and Martin Raubal

14. Wayfinding, Navigation, and Environmental Cognition From a Naturalist’s Stance
    Harry Heft
