Table of Contents

Health Care Won’t Reform Itself
Many Treat & Few Prevent
Studies Prove the Inconsistency of Care
Care Linkage Deficiencies Abound
No Money, No Tools, No Accountability for Linkages
Paper Records Are Entirely and Almost Criminally Inadequate
Providers Don’t Create the Economic Reality
Is Care Too Complex to Coordinate Anyway?
In Other Industries, Lower Prices Increase Sales
Screw-Ups Can Be Profitable
Screw-Ups Aren’t Deliberate
We Need the Courage to Reform Care
We Need Universal Coverage
Tools Need a Use or They Are Useless
Strategic Modifications Are Needed

Why Are Health Care Costs Going Up?
Normal Inflation Is the Bottom Line, First Level, and Basic Cost Driver for Health Care Cost Inflation
Worker Shortages Add to Cost Increases for Care
New Technology, New Treatments, and New Drugs Increase Costs
Few Standards of Value Exist
Other Countries Use Screening Programs for ”New” Care
Untested, Purely Experimental, Unproven Care
The Dilemma & For Some Patients, There Is No Other Hope
Caregivers Sometimes Own the Businesses
Only in America Does ”It Might Work” Work
Let’s Require Disclosure of Effectiveness Research
Massive Care Coordination Deficiencies Add Expenses
Multiple Caregivers Don’t Link Well
Perverse Financial Incentives Also Increase Costs
Problematic Insurance Benefit Design
Changes in Fee Payment Approaches Face Resistance
We Are Getting Older and More Expensive
Inflation, Technology, Inefficiency, Perverse Incentives, and Getting Old Are an Expensive Package

As a Pure, Self-Serving System Health Care Is Winning
Consumers Pay the Price for More Expensive Care
Care Costs Create Premium Costs
"Pass through" to the Customer
The Answer Is "Right Care"

**Set Goals and Improve Care**

Data Isn’t Shared
Random Tools Create Random Results
Begin with Goals
We Don’t Need a Thousand Goals
Work Backward from the Goal to the Strategy
Asthma Care Needs Computerized Data
We Need Computerized Asthma Care Data
Universal Coverage for Children Can Improve Asthma Care
Being Insured Creates a Database
Care Won’t Get Better without Goals
Goals for Key Diseases
The Tool Kits Look a Lot Alike
EMRs Need Support Tools
Patient-Focused EMRs Are Key
Benefit Packages Channel Cash
We Don’t Need to Change the Entire Payment System
Data Is the Secret Sauce
Health Care Can Do This Kind of Work
Three Provider Payment Changes Are Needed
We Need Goals

**Connectors Are Magic**

Older Patients Often Have Major Connection Problems
Medical Home and Packages of Care
A New Generation of Connectors
Connectors Come in Various Versions
Virtual Integration Can Mimic Vertical Integration
EMR Plus Care Support Tools
Denver Improved Outcomes
The Death Rate Dropped
Triple Co-Morbidities in Hawaii
Preventing ER Visits Is a Very Good Thing to Do
Care Registry Worked for "Safety Net" Patients
Hospital Admissions Were Reduced by 70 Percent
We Need to Connect Everyone Who Needs to Be Connected
Buyers Need to Change the Cash Flow
Buyers Should Specify the Context for Care
The Point of Connectors Is to Connect
Claims Data Can Be Used

**The Perfect System**

All, All, and Then All

Information Security Is Essential
CQI Is Needed and CQI Needs Data
American Health Care Needs a Culture of Continuous Learning

Most of Health Care Is Splintered
One-Third Reduction in Broken Bones

Make the Right Thing Easy to Do

The Patient Should Be the Focus of Care Data

Ten Criteria for Ultimate System Design

Six Million E-Visits

All New Systems Should Be Connectable

The Perfect System Is Possible

Personal Health Records Can Fill Part of the Gap
Hub and Spoke Connectivity Can Be Computer Supported

Virtual Care in Remote Sites

Next Step Connectivity

**We Need Universal Coverage, Care System Reform, and Care System Competition**

Interruption Coverage Disrupts Care

Care Improvement Needs Coverage Continuity

Data Should Be Longitudinal

What Kinds of Health Plans Should Compete?

No One Is Accountable if No One Is Accountable

"Insurance Exchanges" Should Offer Care Team Options

**Risk Sharing Works Quite Well, Thank You**

Risk Pooling Is the Key

Co-ops Set Quotas

Ugandans Understand the Cost/Premium Connection

Blame Your Fever on Your Thermometer

The Basic Business Model of Insurance

The Key Is Spreading/Sharing Risk
Swiss Rejected Canadian Model
The Double Mandate
Why Do American Insurers Screen Risk?
Large Numbers Are Not Magic
Risk Pools Don’t Cure Cancer
Pooling Small Groups Isn’t Magic, Either
95 Percent Defines the Business Model
Five Percent of Privately Insured People Had Health Screens
Hassles and Disagreements Are Minimized with Inclusion
Individual Enrollees Have Individual Motivations
Using Someone Else’s Money Is Often Attractive
Expensive New Members Increase Average Costs
Death Spirals Can Be Unfortunate
A Single Mandate Can Destroy Risk Pools
The Best Approach Is to Cover Everyone
People Who Need Heart Transplants Should Get Heart Transplants

**Focus, Tools, and Better Health**

Begin with Chronic Care
Chronic Care Is the First Priority
The Low-Hanging Fruit Is to Bite the Bullet
Focus, Tools, Health
Money Talks
Choices Should Affect Premiums
Registries Should Not Dictate Care
Science Changes

**Health May Be the Highest Priority**

The Girth of America Is Expanding
Americans Are Also Inert
We Need a Culture of Health
Eliminate, Label, Reduce, and Persuade
We Need Half as Many People to Become Diabetic
We Need an Agenda of Health Improvement

**We Also Need to Set Goals to Directly Reduce Costs**

We Need a National Forum for Cost Reduction
We Need a Commission
We Need Complete Data about Cost Drivers for Care
The Goal Should Be to “Bend the Trend”
Health Care Could Be Moving to a Golden Age
