Table of Contents

Section II. elucidating the components responsible for vascular development and disease in the cardiovascular system: the cooperative roles of Foxc1 and Foxc2 in cardiovascular development. Foxo proteins and cardiac pathology. The forkhead transcription factors play important roles in vascular pathology and immunology. Regulatory t-cells, Foxp3 and atherosclerosis.

Section III. dissecting the pathways of neuronal integration and plasticity in the nervous system: Foxp genes, neural development, speech and language disorders, pathophysiological relevance of forkhead transcription factors in brain ischemia. New insights for Foxo and cell-fate decision in HIV infection and HIV associated neurocognitive disorder.
