Table of Contents

1. ETIOLOGY OF NARCOLEPSY
   Etiology and genetics of human narcolepsy
   Emmanuel Mignot, Christian R. Baumann
   Narcolepsy: autoimmunity or secondary to infection?
   Adriano Fontana, Heidemarie Gast, Thomas Birchler
   Is narcolepsy a neurodegenerative disorder?
   Christelle Peyron

2. NEUROCHEMISTRY OF NARCOLEPSY
   The roles of hypocretin/orexin in narcolepsy, Parkinson’s disease, and normal behaviour
   Jerome Siegel
   Histamine in narcolepsy and excessive daytime sleepiness
   Seiji Nishino
   Dopaminergic substrates underlying hypsomnolence, sleepiness, and REM sleep expression
   David B. Rye, Amanda A. Freeman
   The serotonergic system in sleep and narcolepsy
   Chloé Alexandre, Thomas E. Scammell
   Sleep homeostasis, adenosine, caffeine, and narcolepsy
   Hans-Peter Landolt
   Prostaglandin D2: an endogenous somnogen
   Yoshihiro Urase, Osamu Hayaishi

3. THE ROLE OF THE HYPOCRETINS IN SLEEP-WAKE REGULATION
   The neurobiology of sleep-wake systems: an overview
   Pierre-Hervé Luppi, Patrice Fort
   The hypocretins/orexins: master regulators of arousal and hyperarousal
   Matthew E. Carter, Antoine Adamantidis, Luis de Lecea
   Optogenetic probing of hypocretin/orexin regulation of wakefulness
   Antoine Adamantidis, Luis de Lecea
   Hypocretin/orexin receptor functions in mesopontine systems regulating sleep, arousal and cataplexy
   Christopher S. Leonard, Mike Kalogiannis, Kristi A. Kohlmeier
   Afferent control of the hypocretin/orexin neurons
   Thomas S. Kilduff, Junko Hara, Takeshi Sakurai, Xinmin Xie
   The neural basis of sleepiness in narcoleptic mice
   Thomas E. Scammell, Chloé Alexandre
   Mathematical models of narcolepsy
   Cecilia Diniz Behn

4. THE KEY ROLE OF THE HYPOTHALAMUS
   The hypothalamus and its functions
   Giovanna Zoccoli, Roberto Amici, Alessandro Silvani
   The prehistory of orexin/hypocretin and melanin-concentrating hormone neurons of the lateral hypothalamus
   Clifford B. Saper
   Metabolic influence on the hypocretin/orexin neurons
   Denis Burdakov
   Endocrine abnormalities in narcolepsy
   Thomas Pollmächer, Norbert Dahmen
   Appetite and obesity
   Alice Engel, Norbert Dahmen

5. REWARD, ADDICTION, EMOTIONS AND THE HYPOCRETIN SYSTEM
Effects of orexin/hypocretin on ventral tegmental area dopamine neurons: an emerging role in addiction
Stephanie L. Borgland, Ralph J. DiLeone, Maysa Sarhan, Ruth Sharff

Orexin/hypocretin, drug addiction, and narcolepsy
Emotional processing in narcolepsy
Sophie Schwartz
Depression in narcolepsy
Michael Lutter

6. REM SLEEP DYSREGULATION AND MOTOR ABNORMALITIES IN NARCOLEPSY
The clinical features of cataplexy
Sebastiaan Overeem
Parasomnias in narcolepsy with cataplexy
Yves Dauvilliers, Régis Lopez
The motor system and narcolepsy: Periodic leg movements and restless leg syndrome
Luigi Ferini-Strambi

7. THE BORDERLANDS OF NARCOLEPSY
Spectrum of narcolepsy
Claudio Bassetti
Secondary narcolepsy
Philipp O. Valko, Rositsa Poryazova
Posttraumatic narcolepsy
Christian R. Baumann, Rositsa Poryazova
The hypocretin/orexin system and sleepiness in Parkinson’s disease
Rolf Fronczek
Idiopathic hypersomnia
Ramin Khatami

8. THE DIAGNOSIS OF NARCOLEPSY AND THE ASSESSMENT OF FITNESS TO DRIVE
Current diagnostic criteria of adult narcolepsy
Alex Iranzo
The arguments for standardized diagnostic procedures
Geert Mayer
Fitness to drive in narcolepsy
Johannes Mathis

9. TREATMENT OF NARCOLEPSY
Treatment of narcolepsy
Gert Jan Lammers
Treatment of narcolepsy in the child
Michel Lecendreux
