

High-Yield Cell and Molecular Biology

Dudek, Ronald W. PhD

ISBN-13: 9781609135737

Table of Contents

Contents

ix

Prefacevii

Abbreviationsxiii

Chromosomal DNA

I. The Biochemistry of Nucleic Acids1

II. Levels of DNA Packaging2

III. Centromere4

IV. Heterochromatin4

V. Euchromatin4

VI. Studying Human Chromosomes4

VII. Staining of Chromosomes5

VIII. Chromosome Morphology6

IX. DNA Melting Curve7

.....1Chromosome Replication

I. General Features9

II. The Chromosome Replication Process9

III. DNA Topoisomerases11

IV. The Telomere12

V. DNA Damage12

VI. DNA Repair13

VII. Clinical Considerations14

VIII. Summary of Chromosome Replication Machinery16

.....9Meiosis and Genetic Recombination

I. Meiosis17

II. Genetic Recombination19

.....17The Human Nuclear Genome

I. General Features22

II. Protein-Coding Genes23

III. RNA-Coding Genes24

IV. Epigenetic Control.....25

V. Noncoding DNA25

.....	22	The Human Mitochondrial Genome
I. General Features	29	
II. The 13 Protein-Coding Genes	29	
III. The 24 RNA-Coding Genes	29	
IV. Other Mitochondrial Proteins	31	
V. Mitochondrial Diseases	31	
.....	29	Protein Synthesis
I. General Features	33	
II. Transcription	33	
III. Processing the RNA Transcript into mRNA	34	
IV. Translation	35	
V. Clinical Considerations	37	
.....	33	Control of Gene Expression
I. General Features	39	
II. Mechanism of Gene Expression	39	
III. The Structure of DNA-Binding Proteins	41	
IV. Other Mechanisms of Gene Expression	44	
V. The		
VI. The		
.....	39	Lac Operon
..46	trp Operon	47
.....	47	Mutations of the DNA Sequence
I. General Features	49	
II. Silent (Synonymous) Mutations	49	
III. Non-Silent (Nonsynonymous) Mutations	50	
IV. Loss of Function and Gain of Function Mutations	55	
V. Other Types of Polymorphisms	56	
.....	49	Proto-Oncogenes, Oncogenes, and Tumor-Suppressor Genes
I. Proto-Oncogenes and Oncogenes	58	
II. Tumor-Suppressor Genes	60	
III. Hereditary Cancer Syndromes	62	
.....	58	The Cell Cycle
I. Mitosis	66	
II. Control of the Cell Cycle	68	
.....	66	Molecular Biology of Cancer
I. The Development of Cancer (Oncogenesis)	71	
II. The Progression of Cancer	72	
III. Signal Transduction Pathways	73	
.....	71	Cell Biology of the Immune System
I. Neutrophils (Polys, Segs, or PMNs)	77	

<i>II. Eosinophils</i>	78
<i>III. Basophils</i>	78
<i>IV. Mast Cells</i>	78
<i>V. Monocytes</i>	79
<i>VI. Macrophages (Histiocytes; Antigen-Presenting Cells)</i>	80
<i>VII. Natural Killer CD16</i>	
<i>VIII. B Lymphocyte</i>	81
<i>IX. T Lymphocyte</i>	83
<i>X. Immune Response to Exogenous Protein Antigens</i>	85
<i>XI. Immune Response to Endogenous Antigens (Intracellular Virus or Bacteria)</i>	86
<i>XII. Cytokines</i>	87
.....77 Cell	81
<i>of the Immune System</i>	
<i>I. Clonal Selection Theory</i>	89
<i>II. The B Lymphocyte (B Cell)</i>	89
<i>III. The T Lymphocyte (T Cell)</i>	93
<i>IV. Clinical Considerations</i>	95
<i>V. Disorders of Phagocytic Function</i>	96
<i>VI. Systemic Autoimmune Disorders</i>	97
<i>VII. Organ-Specific Autoimmune Disorders</i>	97
.....89	
<i>Molecular Biology Techniques</i>	
<i>I. Action of Restriction Enzymes</i>	101
<i>II. Electrophoresis</i>	103
<i>III. The Enzymatic Method of DNA Sequencing</i>	105
<i>IV. Southern Blotting and Prenatal Testing for Sickle Cell Anemia</i>	107
<i>V. Isolating a Human Gene by DNA Cloning</i>	109
<i>VI. Construction of cDNA Library</i>	111
<i>VII. Polymerase Chain Reaction</i>	113
<i>VIII. Producing a Protein from a Cloned Gene</i>	115
<i>IX. Site-Directed Mutagenesis and Knockout Animals</i>	117
<i>X. Northern Blot (mRNA)</i>	119
<i>XI. Western Blot (Protein)</i>	121
<i>XII. Human Immunodeficiency Virus (HIV) Structure</i>	123
<i>XIII. Ligase Chain Reaction (LCR)</i>	125
<i>XIV. Flow Cytometry</i>	127
.....100	
<i>Identification of Human Disease Genes</i>	
<i>I. General Features</i>	129
<i>II. Identification of a Human Disease Gene Through a Chromosome Abnormality</i>	129
<i>III. Identification of a Human Disease Gene Through Pure Transcript Mapping</i>	130

<i>IV. Identification of a Human Disease Gene Through Large Scale DNA Sequencing</i>	<i>131</i>
<i>V. Identification of a Human Disease Gene Through Comparison of Human and Mouse Maps</i>	<i>132</i>
<i>.</i>	<i>129</i>
<i>Gene Therapy</i>	
<i>I. Gene Therapy</i>	<i>133</i>
<i>II. Ex Vivo and In Vivo Gene Therapy</i>	<i>134</i>
<i>III. Integration into Host Cell Chromosomes or as Episomes</i>	<i>134</i>
<i>IV. Viral Vectors Used in Gene Therapy</i>	<i>134</i>
<i>V. Nonviral Vectors Used in Gene Therapy</i>	<i>135</i>
<i>Appendix 1: The Genetic Code</i>	<i>137</i>
<i>Appendix 2: Amino Acids</i>	<i>138</i>
<i>Appendix 3: Chromosomal Locations of Human Genetic Diseases</i>	<i>139</i>
<i>Figure Credits</i>	<i>145</i>
<i>Index</i>	<i>147</i>
<i>.</i>	<i>133</i>
