

Chemogenomics in Drug Discovery: A Medicinal Chemistry Perspective

Kubinyi, Hugo

ISBN-13: 9783527309870

Table of Contents

Preface.

A Personal Foreword.

List of Contributors.

Introduction (G. Müller & H. Kubinyi).

I: GENERAL ASPECTS.

1. Target Family-directed Masterkeys in Chemogenomics (G. Müller).

2. Drug Discovery from Side Effects (H. Kubinyi).

3. The Value of Chemical Genetics in Drug Discovery (K. Russell & W. Michne).

4. Structural Aspects of Binding Site Similarity: A 3D Upgrade for Chemogenomics (A. Bergner & J. Günther).

II: TARGET FAMILIES.

5. The Contribution of Molecular Informatics to Chemogenomics: Knowledge-based Discovery of Biological Targets and Chemical Lead Compounds (E. Jacoby, *et al.*).

6. Chemical Kinomics (B. Klebl, *et al.*).

7. Structural Aspects of Kinases and Their Inhibitors (R. Buijsman).

8. A Chemical Genomics Approach for Ion Channel Modulators (K. Baringhaus & G. Hessler).

9. Phosphodiesterase Inhibitors: A Chemogenomic View (M. Hendrix & C. Kallus).

10. Proteochemometrics: A Tool for Modeling the Molecular Interaction Space (J. Wikberg, *et al.*).

III: CHEMICAL LIBRARIES.

11. Some Principles Related to Chemogenomics in Compound Library and Template Design for GPCRs (T. Webb).

12. Computational Filters in Lead Generation: Targeting Drug-like Chemotypes (W. Guba & O. Roche).

13. Navigation in Chemical Space: Ligand-based Design of Focused Compound Libraries (G. Schneider & P. Schneider).

14. Natural Product-derived Combinatorial Libraries and Protein Structure Similarity as Guiding Principles for the Discovery of Drug Candidates (M. Koch & H. Waldmann).

15. Combinatorial Chemistry in the Age of Chemical Genomics (R. Joseph & P. Arya).

Index.
