# Modern Multidisciplinary Applied Microbiology: Exploiting Microbes and their Interactions

Mendez-Vilas, Antonio  

## Table of Contents

- A new potential indicator of virological contamination of surfaces
- A novel mechanism for bacterial acid resistance: a carbon dioxide-dependent system
- An individual based model to study the main groups of microbes active in composting process
- Biotechnological approach for treatment of textile wastewater - a case study
- Catalytic performance of lignin peroxidase hosted in AOT reverse micellar medium
- Characterization of [beta]-lactam-resistant genes from a metagenomic library of cold-seep sediments in deep-sea
- Cobalt-induced stimulation and inhibition of cytochromes synthesis and extracellular nitrite release in Paracoccus denitrificans
- Communication of microbial risk to workers in a wastewater treatment plant
- De novo protein production under long term starvation in Flexibacter chinesis
- Development of a biotechnology tool using New Zealand white-rot fungi to degrade pentachlorophenol in soil - a summary
- Ecological interactions among protozoan parasites and their avian hosts: an approach
- Effects of hydrodynamics on biofilm formation
- Effect of organic management on soil chemical and biochemical properties of a Xerofluvent of the Guadalquivir River Valley (SW Spain)
- Environmental virological monitoring for the epidemiological surveillance and risk assessment
- Heavy metal effects on Extremophiles and on enzyme biosynthesis in a new Bacillus strain from Mount Rittmann, Antarctica
- Heavy metal toxicity in Rhizobium leguminosarum biovar viciae isolated from soils neighbouring metalomechanics industries
- Isolation and screening of potential fungi for decolourization of distillery wastewaters
- Microbial corrosion in zinc surface layer of galvanized steel by biofilms of sulfate reducer bacteria
- Microbial diversity and metabolic pathway analyses of a mesophilic acetate-degrading methanogenic community in a chemostat cultivation
- Microbiota associated with Posidonia oceanica in Western Mediterranean sea
- Novel methodologies for the detection and classification of cultured and uncultured microorganisms from cultural heritage samples
- Perylene toxicity in the estuarine environment of Ria de Aveiro (Portugal)
- Phenotypic and genotypic characterization of an outbreak of Pseudomonas aeruginosa from wild birds
- Single and multi-metal removal by an environmental mixed bacterial isolate
- Study of Helicobacter pylori viability in aquatic microcosms by epifluorescence stain and in situ hybridization
- Survival of Ralstonia solanacearum biovar 2 in river water: influence of water microbiota
- The control of biological corrosion in cooling water system of a power plant
- The effects of various antibiotics on marine bacteria
- The influence of temperature and type of illumination on the biochemical composition and EPA production of Nannochloropsis gaditana
- Two-phases olive mill solid waste treatment in an anaerobic continuous stirred tank reactor at diluted influent concentrations: evaluation and implicated microorganisms
- Use of rRNA gene restriction patterns in Colibacillosis by E. coli O78, O88 and non-typhoid strains in wild birds
- Acrylic acid removal from synthetic wastewater and actual industrial wastewater by pure culture of bacteria isolated from the acrylonitrile-butadiene-styrene resin manufactured wastewater treatment system
- Biodegradation of hydrolyzed polyacrylamides in aqueous solution
- Biomethanation of sugar industry wastewater by using down-flow anaerobic filter
- Biosynthesis of calcium gluconate by Aspergillus niger in shake flask
- Combined effect of doxorubicin and metal on the yeast Candida utilis
- Hydrodynamic analysis and inoculum effect on Rhizopus nigricans growth for cellulase production in bubbling column bioreactor
- Inactivation mechanisms of his-tagged D-amino acid oxidase from Trigonopsis variabilis
- Killer activity of yeasts isolated from Spanish dry-cured ham
- Limiting factors of photo-hydrogen production by Rhodopseudomonas palustris WP3-5
- Mineral-phosphate solubilization activity of iron ore associated microflora
- Optimisation of two recombiant whole cell systems for the production of optically pure D-amino acids
- Single cell protein production by Saccharomyces sp no 12 by utilizing Lignocellulosic waste and its nutritional evaluation
Study on the hemoprotein at 503 nm in Salmonella typhimurium
The knowledge flow and commercialisation along the continuous chain : education - research- implementation by innovative methods
Xanthan gum production using whey for preculture preparation
An assessment of differential media for the recovery of histamine producing bacteria
Aeromonas growth under low temperatures
Comparison of two processes for isolation of exopolysaccharide produced by Lactobacillus acidophilus
Detection of Listeria monocytogenes from fresh and marine water fish using Real Time PCR, PCR and standard ISO methods
Direct identification of Campylobacter species in poultry samples by multiplex PCR
Ecology and biodiversity of microbial populations in spontaneous grape must fermentations
Effects of NH$_4$VO$_3$ on mitochondrial electron-transport chain and glutathione peroxidase activity of Saccharomyces cerevisiae UE-ME
Identification by PCR of trichothecone-producing Fusarium
Isolation of Arcobacter butzleri from meats and its susceptibility to acids and humectants
PCR assay for identification of Aspergillus section Nigri using internal transcribed spacer regions 1 and 2
Progress in prevention of aflatoxin contamination in food by preharvest application of a yeast strain, Pichia anomala WRL-076
Quantitative models application to fulfil microbiological criteria in foods
Rapid biased evolution of genetically unstable wine yeast hybrids under non-selective conditions
Rodamine resistance as marker for monitoring yeasts in wine fermentations
Strength of attachment affects survival of Salmonella on inoculated cantaloupe treated with sanitizers
Sulfometuron methyl resistance as genetic marker for monitoring yeast populations in wine fermentation
Use of carbon dioxide to control the microbial spoilage of bullfrog (Rana catesbeiana) meat
Agricultural non point sources control against microbiological contaminations of drinking water resources in dairy mountain areas
Antagonistic activity of actinomycetes and fungi from horticultural compost against phytopathogen microorganisms
Application of arbuscular mycorrhizal fungal in vitro biofertilizers in agro-industries
Biological control of flax scorch using Glomus intraradices and Trichoderma atroviride
Characterization of Brenneria sp. from poplar cankers in Spain
Environmental purification capacity and control of microbiological contamination of water resources in dairy mountain area
Group specific primers for studying Methylobacterium biodiversity on crop plants
Microbial biodiversity in soils under a conservation agriculture regime
Molecular analysis of microbial communities in northern terrestrial systems
MycorID : a molecular database based on ITS-RFLP analysis for identification of ectomycorrhizae at Iberian Peninsula
Nitrification and denitrification associated with N$_2$O production in a temperate N-fertilized irrigated Uruguayan rice field
Nitrifier bacterial activity linked to mineralization of soil organic matter : individual based simulations
Nitrogen biological fixation ability by Rhizobium leguminosarum biovar phaseoli on cultivars of Phaseolus vulgaris L.
Phenotypic and genetic diversity of fluorescent Pseudomonas recovered from different host plants
Population of Aspergillus flavus on pistachio buds and flowers
Removal of microorganisms present in lettuces and soil irrigated with treated wastewaters
Soil amendment with sludge generated from metal finishing industries and its impact on metabolic quotient
Spatial properties in individual-based modelling of microbial systems : study of the composting process
Ultrastructural and cytochemical aspects of spores germination of Mucor javanicus wehmer
Activity of soil microbial communities to monitor the efficiency of a metal phyto remediation process with Thlaspi caerulescens
Bioprocesses under practical aspects - multimedia environmental impact assessment of in situ - soil remediation with genetically modified microorganisms
Characterization of Cladosporium oxyssporum and C. sphaerospermum using polyaromatic hydrocarbons (PAHs) as their sole carbon source in tropical coastal seawater
Comparison of microbial communities native to three differently polluted ecological niches in the industrial site of Bagnoli (Naples, Italy)
Decolorization of methyl orange (as a model azo dye) by the newly discovered Bacillus sp
Degradation of polystyrene film strips by soil fungal isolates
Enhanced biodegradation of polycyclic aromatic hydrocarbons using nonionic surfactants in soil slurries
Enumeration of naphthalene and phenanthrene degrading bacteria as an indicator of hydrocarbon pollution in surface waters of Guayanilla, Puerto Rico : impact of seasonal variations
Formation of Cr(V) and Cr(III) in Arthrobacter oxydans exposed to high concentrations of Cr(VI)
Metabolism of cyanate and cyanide in the alkalophilic bacterium Pseudomonas pseudoalcaligenes CECT5344
Microbial ecology of authothermal aerobic digestion (ATAD) : diversity, dynamics and activity of bacterial communities involved in treatment of a municipal wastewater
Microbial function after assisted natural remediation of a trace element polluted soil
Microbiological characterization of ammonium oxidizing biofilms in rotating biological contactor (RBC) using
different support materials
Occurrence of two metabolic pathways in benzo[a]pyrene degradation by a Deuteromycete fungus Fusarium solani
Oleophilic fertilizers and bioremediation: a new perspective
On site bioremediation and washing techniques in a cobble beach affected by prestige oil spill
Towards the applicability of rhodococcis in monoaromatic compounds bioremediation
Transport behaviour of chemotactic bacteria in model aquifers
Biomass selection and acclimatization for toluene degradation in a biofilter
Cloning and overexpression of an alkaline and thermostable [alpha]-amylase from a native Iranian Bacillus species (Bacillus sp-GSH) isolated from the soil of Rasht
Evaluation of performance and kinetics of mesophilic and thermophilic anaerobic digestion for treatment of palm oil mill effluent
Expression in E. coli of a recombinant form of pulmonary surfactant protein precursor proSP-B[subscript [Delta]C]
Influence of grape sanitary quality on yeast killer effect at the winery
Inhibitory effects of UV-absorption compounds in hemicellulose hydrolysate on xylitol production by yeast
Production and application of 5-aminolevulinic acid from Rhodobacter capsulatus SS3 cultivating in monosodium glutamate effluent
Protein profile of Streptomyces clavuligerus strains related to regenerating cells
Isolation and screening of oleaginous microorganisms for the production of a nutraceutical single cell oil
Manufacturing and characterization of bacterial cellulose tubes using two different fermentation techniques
Microbial biotechnology and bioengineering aspects for large-scale xylitol bioproduction from lignocellulosic residues
Neural network based software sensors: application to biosurfactant production by Candida lipolytica
Conventional and real-time PCR assays for detection and quantification of the expression of fumonisin biosynthetic gene fum5 in Fusarium verticillioides
Induction of chromosome replication as a heat stress response in Escherichia coli
Medium effect on heterologous protein leaky expression in Escherichia coli
Modulation of gene expression by 3'-UTR regions in yeast: a promoter-independent alternative
Molecular properties of two nitroreductases from Rhodobacter capsulatus B10 involved in 2,4-dinitrophenol reduction
Nitrate assimilation in Rhodobacter capsulatus E1F1: purification and biochemical characterization of nitrite and hydroxylamine reductases
Proteases of Trichoderma strains from Hungarian winter wheat rhizosphere
The yeast external invertase as a reporter to study regulation of Candida albicans promoter sequences in Saccharomyces cerevisiae
Towards understanding the acetic acid resistance in Gluconacetobacter europaeus
Transcriptome dynamics of ethanologenic yeast in response to 5-hydroxymethylfurfural stress related to biomass conversion to ethanol
Detection and characterization of integrons, transposons, plasmids and genomic types in multidrug resistant clinical isolates of Salmonella enterica serovar Virchow
Effect of the essential oils of Brazilian species of the genus Cunila on the growth and biofilm formation by Aeromonas
Human and bovine constitute reservoirs of different sub-populations of Staphylococcus aureus in possession of the highly prevalent enterotoxin gene cluster egc[subscript like]
Improved cytocompatibility of titanium alloy by coating with pure titanium films using sputter-deposition
Is intestinal microbiota bound up with changing lifestyle?
PCR procedures for detection of emergent multidrug resistant lineages of Salmonella serovar Typhimurium: evolution of a lineage carrying the plasmid pUO-StVR2
Biotechnology, microbiology and secondary school
Ciliates as potential biosensors for heavy metal pollution
Concentration, detection and identification of infectious enteroviruses in sewage
Effect of inoculum on the survival of pathogenic agents in different composts
Microbial diversity and chimerae from PCR amplified products
Screen-printed metal oxides-based enzyme biosensors for food analysis
The study of the fermentative growth of Saccharomyces cerevisiae S288C using auxoaccelerostat technique
Comparison of different analytical methods for determination of type B trichothecenes in wheat and ochratoxin A in beer
DVC-FISH procedure to enumerate specific viable cells of Lactobacillus delbrueckii subsp. bulgaricus DN-100182
Fluorescence imaging and new fluorescence techniques applied to cellular pathopharmacology
Impact of Bifidobacterium animalis DN-173010 on human intestinal microbiota by fluorescent in situ hybridization
Scanning electron microscope study of fish and rice flour coextrudates
Thin section and freeze-fracture electron microscopy of Paracoccus denitrificans bacterium
