

Photoelectrochemical Materials and Energy Conversion Processes

Alkire, Richard C.

ISBN-13: 9783527328598

Table of Contents

Preface.

List of Contributors.

1 Applications of Electrochemistry in the Fabrication and Characterization of Thin-Film Solar Cells (*Phillip Dale and Laurence Peter*).

1.1 Introduction.

1.2 Electrochemical Routes to Thin-Film Solar Cells.

1.3 Characterization of Solar Cell Materials using Electrolyte Contacts.

1.4 Conclusions.

Acknowledgments.

References.

2 Tailoring of Interfaces for the Photoelectrochemical Conversion of Solar Energy (*Hans Joachim Lewerenz*).

2.1 Introduction.

2.2 Operation Principles of Photoelectrochemical Devices.

2.3 Surface and Interface Analysis Methods.

2.4 Case Studies: Interface Conditioning.

2.5 Photovoltaic, Photoelectrochemical Devices.

2.6 Photoelectrocatalytic Devices.

2.7 Synopsis.

Acknowledgments.

Appendix 2.A.

Appendix 2.B.

Appendix 2.C.

References.

3 Printable Materials and Technologies for Dye-Sensitized Photovoltaic Cells with Flexible Substrates (*Tsutomu Miyasaka*).

3.1 Introduction: Historical Background.

3.2 Low-Temperature Coating of Semiconductor Films.

3.3 Photoelectric Performance of Plastic Dye-Sensitized Photocells.

3.4 Polymer-Based Counter Electrodes with Printable Materials.

3.5 Investigation of High-Extinction Sensitizers and Co-adsorbents.

3.6 Durability Development for Plastic DSSCs.

3.7 Fabrication of Large-Area Plastic DSSC Modules.

3.8 Concluding Remarks.

References.

4 Electrodeposited Porous ZnO Sensitized by Organic Dyes – Promising Materials for Dye-Sensitized Solar Cells with Potential Application in Large-Scale Photovoltaics (*Derck Schlettwein, Tsukasa Yoshida, and Daniel Lincot*).

4.1 Introduction.

4.2 Electrodeposition – A Well-Established Technology.

4.3 Electrodeposition of ZnO Thin Films.

4.4 Sensitization of ZnO.

4.5 Alternative Sensitizer Molecules.

4.6 Electrodeposition of Hybrid ZnO/Organic Thin Films.

4.7 Porous Crystalline Networks of ZnO as Starting Material for Dye-Sensitized Solar Cells.

4.8 Adaptation of Electrodeposition Towards Specific Demands of Alternative Substrate Materials.

4.9 State of the Art and Outlook.

References.

5 Thin-Film Semiconductors Deposited in Nanometric Scales by Electrochemical and Wet Chemical Methods for Photovoltaic Solar Cell Applications (*Oumarou Savadogo*).

5.1 Introduction.

5.2 Materials and Composite Materials Fabrication.

5.3 Systems Development.

5.4 Conclusions and Perspectives.

References.

Index.
